

Note: Due to a case of laryngitis, Panel Vice-Chair Lissa Weinmann used meeting chat to participate throughout this meeting.

John Loggia & Lissa Weinmann to Everyone ~6:08 PM

Lissa is here but unable to talk.

I approve minutes.

Thank you Corey.

No see Corey presentation

John Loggia & Lissa Weinmann to Everyone 6:33 PM

Corey put the summer to good use, what an incredible accomplishment. Kudos to all workers who put themselves on the line to get the job done.

Questions:

Indoor contamination picked up by air filter goes where and how is it disposed of/categorized?

How is outdoor air quality maintained/monitored during excavation/leveling that does involve radiological samples?

Schuyler Gould to Everyone 6:37 PM

Pretty amazing, very impressive. Question to Corey: What exactly is grout, and can you talk a little about the grouting of shipments as well as the filling with grout of underground pipes that are being left in place?

John Loggia & Lissa Weinmann to Everyone 6:38 PM

On workers — are workers specially trained to be doing spent fuel media removal? How many worked on this part of the project in spent fuel and dryer separator? Do you subcontract from an outside company? How are their exposures monitored and/or recorded?

Can you explain what isolation controls are again and how they relate to partial site release from arc, and when do you think you will get that release? Once you get the release, can you relax security / controls?

arc=NRC

John Loggia & Lissa Weinmann to Everyone 7:03 PM

For DPS or Corey: Northstar anticipates collecting \$250 million in judgments against DOE up to 2052 for spent fuel storage — wondering if that includes recent judgment for \$55 million and previous such payments.

For Bill Irwin: can you report on your Dept's measures to ensure public safety from excavation and other activities? What / where do you measure airborne and other radiation and/or radionuclides in soil outside property line.

John Loggia & Lissa Weinmann to Everyone 7:15 PM

Can Bill Irwin comment on ambient/outside fence line radiation control monitors?

John Loggia & Lissa Weinmann to Everyone 7:21 PM

Thank you Bill Irwin.

John Loggia & Lissa Weinmann to Everyone 7:22 PM

Recent article on judgment: <https://natlawreview.com/article/united-states-ordered-pay-breach-contract-damages-nuclear-operator-spent-fuel>

Yes I would, thank you.

John Loggia & Lissa Weinmann to Everyone 7:27 PM

Description

Good Energy Collective Incorporated conducts policy research and builds the progressive case for nuclear energy as an essential part of the broader climate change agenda. They work to align the clean energy space with environmental justice and sustainability.

\$2million for good energy collective is a giant contract from DOE

John Loggia & Lissa Weinmann to Everyone 7:29 PM

DOE committing \$26million for this effort, a repeat from previous consent-based siting that began a decade ago. DOE says this analysis will take 7 years.

DOE also issued a report on 9/9/24 siting Vernon as a prime potential site for new nuclear.

Will provide full report next meeting.

John Loggia & Lissa Weinmann to Everyone 7:33 PM

On federal nuclear waste committee, next meeting planned for 10/21.

I added comments above.

John Loggia & Lissa Weinmann to Everyone 7:38 PM

I'm ok with last measure

Agree we should review the annual report first before public.

Who cares about expense we have a budget for it.

John Loggia & Lissa Weinmann to Everyone 7:43 PM

I prefer to have an in person option.

Perhaps we can do place BCTV is accustomed to work.

corners on public info?
