Rate Design Concerns
Billing based on # of bedrooms not accurate
Customers have no control over rates because not based on measured use
Residential customers more burdened than commercial
BVCWS owns Bolton Valley and other commercial enterprises - in their interest to keep biz costs low
Are residents & businesses paying their fair share into the system
Bedroom count not fair way to manage
We were told meters might be added but our rate (base rate) would still be based on # of bedrooms... water rates must be based on usage. A 2 bedroom home that
has 5 people living in it uses more water than a 5 bedroom home that has 2.
It needs to be equitable.
People have (seasonal) visitors some people for the winter... not being charged
