

VERMONT DEPARTMENT OF PUBLIC SERVICE

GRANT APPLICATION INSTRUCTIONS

This grant provides funding for studies and business plans for the deployment of broadband access services in underserved areas throughout Vermont. This round of grants is open to electric distribution utilities.

REQUEST FOR PROPOSAL OVERVIEW

The Department of Public Service (“Department”) hereby publishes this request for proposals in compliance with Section 10 of Act 79 of 2019. This grant opportunity is the second of three funding rounds. In this round, the Department invites applications from electric distribution utilities (hereinafter “Respondents”) to conduct feasibility studies and, contingent on findings that the proposed model stands a reasonable chance of success, to create business plans related to the deployment of broadband in rural unserved and underserved areas of Vermont. **Only electric distribution utilities may apply.** The successful Applicants will submit bids to perform feasibility studies and produce actionable business plans for potential broadband solutions. Actionable business plans are defined as comprehensive plans used to justify the business case for a financial institution to provide funding. The plan will include high-level engineering and design plans, financing models, estimated construction costs, and ideal operational models. Business plans are only funded when the feasibility returns a positive finding. A single grant award may not exceed \$60,000. **No more than two Applicants will be selected for the second round** of this grant program.¹ The Department will release a third round in the spring that will be open to all other types of eligible recipients.

Background: The Department is an agency within the executive branch of Vermont state government and is charged with representing the public interest in energy, telecommunications, water, and wastewater utility matters.

The Department is responsible for evaluating innovative solutions that provide broadband to rural unserved and underserved areas of Vermont. Under Act 79, passed by the 2019 Vermont General Assembly, the Department was tasked with conducting a study of the “feasibility of electric

¹ Act 79 states that “no more than two electric utilities shall be awarded a grant under this program.”

companies offering broadband service in Vermont” using electric distribution and transmission infrastructure. The study, issued on January 1, 2020, addresses the following items:

- “The compatibility of broadband service with existing electric service”;
- “The financial investment necessary to undertake the provision of broadband service”;
- “Identification of the unserved and underserved areas of the State where the provision of broadband service by an electric company appears feasible”;
- “The impact on electric rates”;
- “The financial risk to electric companies”;
- “Any differences that may exist between electric companies”; and,
- “Any financial consequences and any technical or safety issues resulting from attaching communications facilities in the electric safety space as opposed to the communications space of distribution infrastructure.”²

The Department is also charged with administering the Broadband Innovation Grant Program. The purpose of the Program is to evaluate innovative solutions that provide broadband to rural unserved and underserved areas of Vermont. This round, the second of three, is open only to electrical utilities who, after reviewing the Department’s report, are interested in evaluating the feasibility of increasing access to broadband in their service region by a) directly providing broadband to their customers or b) partnering with a third party to expand access to broadband.

Grant Opportunity Overview: The Department seeks proposals from electric utilities to conduct feasibility studies related to the deployment of broadband in unserved and underserved areas of Vermont. The following conditions apply to the Program:

- 1) In awarding grants, the Commissioner shall give preference to feasibility studies that contemplate the provision of broadband service that is symmetrical.
- 2) Eligible grant Applicants must be an electric utility. This includes municipal utilities, electric co-ops, or investor owned utilities.
- 3) A total grant award may not exceed \$60,000.00.

Eligible Locations: Applicants shall identify a proposed service territory and Department staff will lend preference to those that include unserved and underserved locations in the proposed boundary. The Department of Public Service publishes maps that indicate the level at which counties and towns are served. Maps and tables including pertinent geographic and service data are available on the Department’s website³.

GRANT OPPORTUNITY PROCESS

Activity Supported Under this Grant: The Department, through this grant opportunity, intends to review proposals from electric utilities seeking to determine the viability of different innovative

strategies for enabling broadband deployment in rural unserved and underserved areas of Vermont. Feasibility studies with positive findings will be followed up by a business plan that outlines how the grantee's chosen proposal can be accomplished. Grants will be structured to provide 50% of the requested amount upon submission of a credible feasibility study, regardless of the finding. Reimbursement is subject to Applicant's evidence of actual costs and itemized invoices provided to the Department.

If, after submission of a finding that a proposed project is feasible, and concurrence in this finding by the PSD, the grantee will be authorized to proceed with the second phase of the project to produce an actionable business plan. For the purposes of this grant, a project will be considered feasible if the report's findings show that the project will be cash-flow positive within three years of the receipt of required initial investment, considering projected income and project-related capital and operating expenses.

Feasibility Study: The Department seeks proposals to collect vital information including, but not limited to:

- Survey-informed estimated "take rates" for new service (ie, the percentage of potential subscribers who are offered service that choose to subscribe)
- Inventory of vertical and underground assets (Where are useable poles? Who owns them? What is already attached?)
- Analysis of alternative deployment routes
- The presence or lack of commercial areas such as town centers, retail locations, manufacturing facilities, clinics, and whether they are adequately served.
- Bandwidth needs
- A proposed project service area
- A basic technical design with sufficient detail to enable rough cost projections
- Proforma financial projections for the project for at least three years
- Current and previous three years' financials of proposed operating entity
- An opinion from a reputable unrelated third party such as a lending institution concurring with a finding of feasibility.

Business Plan: Upon completion of the Feasibility Study, phase II requires the grantee to produce an actionable business plan for a potential broadband solution (with speeds at a minimum of 25/3 Mbps), which may include proposals to:

- (1) Make improvements to the distribution grid in furtherance of providing broadband service in conjunction with electric distribution grid transformation projects;
- (2) Operate a network using electric distribution and transmission infrastructure to provide broadband service at speeds of at least 25 Mbps download and 3 Mbps upload; and
- (3) Permit a communications union district or other unit of government, nonprofit organization, cooperative, or for-profit business to lease excess utility capacity to provide broadband service to unserved and underserved areas of the State⁴.

⁴ Network operator models listed here are drawn from a feasibility report produced through the Department of Public Service in compliance with Act 79 of 2019.

For the purposes of this grant, an actionable business plan is a document that a financial institution would find sufficient basis on which to provide financial support. The business plan shall include, but is not limited to:

- High level Engineering and design plans
- Market Analysis
- Financing models, *pro forma* financial projections
- Estimated construction costs
- Ideal operational models
