Vermont Community Broadband Board

The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

Vermont's Internet for All Plans

July 2023 Draft for Public Comment

VERMONT
VERMONT COMMUNITY BROADBAND BOARD

Table of Contents

ExecutiveSummary

The Infrastructure Investment and Jobs Act (IIJA or Infrastructure Act), passed into law in 2021, includes historic investment to close the digital divide and ensure that all US residents have access to reliable, high speed, and affordable broadband. Administered by the National Telecommunications and Information Administration (NTIA), the Broadband Equity, Access, and Deployment (BEAD) program will provide funding to the State of Vermont to address broadband availability and adoption needs. The Vermont Community Broadband Board (VCBB) is responsible for developing Vermont's strategy and implementation plans.

Vermont's vision for broadband equity, access, and deployment is that all Vermonters have universal access to reliable, high-quality, affordable, fixed broadband at speeds of at least 100/100 megabits per second (Mbps), and that all Vermonters and institutions have the tools and skills to maximize the value Internet connectivity can offer. This Five-Year Action Plan outlines how Vermont can achieve this vision, what its current state is, the State's needs and gaps, and its plan for action. The goals of Vermont's BEAD Five-Year Action Plan are to:

- Mobilize resources for end-to-end broadband infrastructure deployments to all unserved and underserved locations and CAIs in Vermont.

- Ensure sustainable, community-driven solutions across the entire State.

- Ensure high-speed broadband services and devices are affordable and advance digital equity for all Vermonters.

- Enhance workforce development for broadband and the digital economy.

- Improve socio-economic conditions across Vermont.

21%

Vermont Households lack access to high-speed broadband at 100/20 Mbps or better

17%

Eligible Vermont households are enrolled in the Affordable Connectivity Program (ACP)

100%

Vermonters will have access to high-speed broadband upon completion of the BEAD program by December 31, 2028

Vermont's strategic approaches to achieve these goals include:

- Keeping an intentional focus on equity when targeting resources and ensuring Vermonters have high-quality choices they can afford.

- Honoring the strategy and efforts already underway in Vermont to tackle inequities in broadband access.

- Fostering continuous stakeholder engagement and adaptability.

- Ensuring a transparent, fair, and open process.

- Ensuring resilient, future-proof technology and approaches are adopted (requiring 100/100 Mbps with a strong preference for end-to-end fiber networks).

While all surmountable, potential barriers to success include:

- Institutional, such as how to maximize the efficacious use of funding when data and information about broadband coverage is limited and continuously changing;

- Legal, such as balancing compliance with federal statutory requirements to conduct an open, fair, and competitive process while staying true to the Communications Union District (CUD) structures established by the State Legislature; and

- Economic, such as the cost of deployment in difficult terrain with low population density, maximizing impact of available funds, and ability to guarantee affordable service options.

The VCBB has heard from Vermonters across the State and recognizes the importance of affordable broadband access for healthcare, education, employment, safety, and more. The VCBB is committed to seizing this historic opportunity to ensure all Vermonters have the option to connect to high-speed broadband and have access to the tools and skills to fully engage in today's digital society and economy.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

5

Acknowledgments

The VCBB would like to thank the many individuals and organizations who contributed their time and input in shaping this plan. The VCBB appreciates all the time and input from the thousands of Vermonters who joined our listening sessions, responded to our survey and requests for input, or reached out in other ways, as well as the dozens of community-based organizations and businesses who contributed their feedback and expertise to this plan. The VCBB would also like to thank the following organizations for contributing to shaping this plan, including:

Adult Education and Literacy Network

Association of Area Agencies on Aging

Association of Planning and Development Commissions

Central Vermont Adult Basic Education

Chittenden County Communications Union District

Comcast

Community Action Partnership

Community Roots

Consolidated Communications

Converge Accessibility

CVFiber

Department of Corrections

Department of Disabilities, Aging, and Independent Living

Department of Labor

Notice of Funding Opportunity Requirements Table

Table 1 outlines NTIA's requirements for the Five-Year Action Plan as defined in the BEAD Notice of Funding Opportunity (NOFO) and the sections of this plan in which they are addressed[1]

TABLE 1. BEAD NOFO REQUIREMENTS TABLE

#	NOFO Requirement	Reference Location
1	Provide details of the existing broadband program or office within the Eligible Entity, including any activities that the program or office currently conducts, any previous entity-wide plans or goals for availability of broadband, and any prior experience awarding broadband deployment grants.	**Existing Programs**
2	Identify the funding that the Eligible Entity currently has available for broadband deployment and other broadband-related activities, including data collection and local planning, and the sources of that funding, including whether the funds are from the Eligible Entity or from the federal government.	**Existing Funding**
3	Identify existing efforts funded by the federal government, including the Universal Service Fund (USF), or an Eligible Entity to deploy broadband and close the digital divide.	**Existing Programs** **Existing Funding**
4	Identify the current full-time and part-time employees of the Eligible Entity who will assist in implementing and administering the BEAD Program and the duties assigned to those employees, as well as any existing contracted support, and any planned expansion of employees or contractors.	**Existing Programs**
5	Identify known or potential obstacles or barriers to the successful implementation of the BEAD Program and the Eligible Entity's corresponding plans to address them.	**Issues to Overcome for Successful Implementation**
6	Include an asset inventory that catalogues broadband adoption, affordability, equity, access, and deployment activities occurring within the Eligible Entity and identifies and provides details regarding any relevant partners, such as community-based organizations and Community Anchor Institutions (CAIs) that may inform broadband deployment and adoption planning.	**Assessment: Assets, Needs, and Gaps**

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

#	NOFO Requirement	Reference Location
7	Include a description of the Eligible Entity's external engagement process, demonstrating collaboration with local, regional, and Tribal (as applicable) entities (governmental and non-governmental) and reflective of the local coordination requirements outlined herein, including outreach to underrepresented communities and unions and worker organizations. The engagement required must be undertaken both during the development of the Five-Year Action Plan itself and following submission of the plan, reflecting ongoing collaboration throughout the BEAD Program.	**Stakeholder Engagement Process**
8	Incorporate available federal, Eligible Entity, or local broadband availability and adoption data, including but not limited to ACP enrollment data. Other federal broadband data sources include the NTIA Internet Use Survey, the NTIA Indicators of Broadband Need Map, and the American Community Survey (ACS)	**Assessment: Assets, Needs, and Gaps**
9	Identify local and regional broadband service needs and gaps within the Eligible Entity's boundaries, including unserved or underserved locations and CAIs without Gigabit service, and/or any plans to make these determinations where service availability is unclear.	**Assessment: Assets, Needs, and Gaps**
10	Provide a comprehensive, high-level plan for providing reliable, affordable, high-speed Internet service throughout the Eligible Entity, including a. The estimated timeline and cost for universal service,	**Estimated Timeline and Cost of Universal Service** **Planned Utilization of Federal, State, and Local Funding**
	b. The planned utilization of federal, Eligible Entity, and local funding sources,	**Planned Utilization of Federal, State, and Local Funding**
	c. Prioritization of areas for federal support,	**BEAD Priorities and Planned Activities**
	d. Any consideration afforded to the use of public-private partnerships or cooperatives in addressing the needs of the Eligible Entity's residents,	**BEAD Priorities and Planned Activities**
	e. Strategies to address affordability issues, including but not limited to strategies to increase enrollment in the ACP by eligible households; and	**BEAD Priorities and Planned Activities**
	f. Strategies to ensure an available and highly skilled workforce (including by subgrantees, contractors, and subcontractors) to minimize project disruptions, including any plans to ensure strong labor standards and protections, such as those listed in Section IV.C.1.e; and plans to attract, retain, or transition the skilled workforce needed to achieve the plan's goals, including describing the involvement and partnerships of sub-grantees.	**BEAD Priorities and Planned Activities**

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

9

| #	NOFO Requirement	Reference Location
11	Identify digital equity and inclusion needs, goals, and implementation strategies, including ways in which the Eligible Entity plans to utilize BEAD funding, Digital Equity Act (DEA) funding and/or other funding streams in concert to remedy inequities and barriers to inclusion. Accordingly, the Five-Year Action Plan should set forth a vision for digital equity, include the results of a needs assessment for underrepresented communities and an asset inventory of ongoing digital equity activities, and detail holistic strategies around affordability, devices, digital skills, technical support, and digital navigation. This requirement may be satisfied by the completion of a State Digital Equity Plan under the Digital Equity Act. Please refer to the Digital Equity Act State Planning Grant Program NOFO for the requirements and deadlines applicable to that program.	**Vision** **Broadband Adoption Assessment: Assets, Needs, and Gaps** **Broadband Affordability Assessment: Assets, Needs, and Gaps** **BEAD Priorities and Planned Activities**
12	Detail alignment of the Five-Year Action Plan with other existing and planned economic development, telehealth, workforce development, related connectivity efforts, and other Eligible Entity priorities.	**Implementation Plan Alignment**
13	Describe technical assistance and additional capacity needed for successful implementation of the BEAD Program.	**Implementation Plan Technical Assistance**

Background

The IIJA, passed into law in 2021, includes a significant investment of $65 billion to help close the digital divide and ensure that all residents have access to reliable, high speed, and affordable broadband. This historic investment will lay critical groundwork for widespread availability and adoption of broadband, creating new jobs and economic opportunities, providing increased access to healthcare services, enriching educational experiences of students, and improving overall quality of life for all US residents.

NTIA is administering two grant programs for states: the BEAD[2] program and the Digital Equity Act program.[3] The VCBB has been tasked with developing Vermont's strategy for broadband and digital equity, and the State's plan for administering the funding it receives from NTIA.

FIGURE 1. BEAD COMPONENTS AND PROCESS

BEAD Five-Year Action Plan

Describes Vermont's broadband goals and priorities and serves as a comprehensive needs assessment that will inform the State's Initial Proposal.

Initial Proposal

Explains how Vermont intends to administer BEAD subgrants (i.e., challenge process, eligibility requirements, scoring criteria for subgrantee selection) and ensure that every resident has access to a reliable, affordable, high-speed broadband connection.

Challenge Process

A transparent, evidence-based, fair, and expeditious challenge process under which a unit of local government, nonprofit organization, or broadband service provider can challenge a determination in the Initial Proposal as to whether a location or community anchor institution within the jurisdiction of the State of Vermont is eligible for grant funds.

Subgrantee Selection Process

A fair, open, and competitive processes for selecting subgrantees.

Final Proposal

The outcome of the State of Vermont's subgrantee selection process and its detailed plan for administering the BEAD grant program.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

11

The two programs will be designed to be closely aligned and complementary. This document comprises Vermont's BEAD Five-Year Action Plan and is the first step of the process summarized in Figure 1.

This plan was developed based on extensive data analysis and stakeholder input. The VCBB engaged other state agencies, nonprofits, elected officials, CUDs, private Internet service providers (ISPs), and individual Vermonters through events, meetings, surveys, public comment periods, and weekly office hours.

"Help us build equity and possibility, especially in the remote corners of Vermont, through a broadband infrastructure that is built for the people" –Written feedback from Vermont resident

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

Overview of the Five-Year Action Plan

Vision

Vermont's vision for broadband equity, access, and deployment is that all Vermonters have universal access to reliable, high-quality, affordable, fixed broadband at speeds of at least 100/100 Mbps, and that Vermonters and institutions have the tools and skills to maximize the value Internet connectivity can offer. Vermont is working toward this vision by coordinating, facilitating, supporting, and accelerating community broadband solutions.

The social and economic benefits of high-quality Internet connectivity and online services are now widely understood and accepted. Connectivity has become integral to everyday activities from regular social interactions and access to media to participating in school or pursuing a career, responding to emergencies, improving farming efficiency and agricultural output, and combatting climate change.

Achieving universal high-speed Internet access for all citizens isn't just a question of ensuring everyone has access to faster connections. It also involves making sure people can afford the fixed broadband services made available to them, have devices that enable them to productively work and learn online, and have the skills, comfort, and confidence to navigate and leverage online content and services.

Goals and Objectives

To achieve this vision, the VCBB has defined five actionable goals, subsequent objectives, and indicators of success by December 31, 2028, and 2030. Specific priorities, plans, and activities are described later in the section titled Implementation Plan.

Goal: Mobilize resources for end-to-end broadband infrastructure deployments to all unserved and underserved locations and CAIs in Vermont.

Objectives:

- Leverage BEAD and other available funding resources to remove barriers and foster a competitive and sustainable market for broadband service across Vermont.

- Design and implement the BEAD grant program for reliable and resilient broadband infrastructure deployments that use scalable technologies appropriate to the local geography to expand high-speed broadband to (1) unserved locations lacking access to 25/3 Mbps broadband; (2) underserved locations lacking access to 100/20 Mbps broadband; and (3) connecting eligible CAIs.

- Assist subgrantees and CUDs in securing funding from additional sources for broadband infrastructure deployments.

Indicators of success by December 31, 2028:

- 100/100 Mbps broadband or better available in 100 percent of currently unserved and underserved on-grid locations lacking access to 25/3 Mbps.

- 100/20 Mbps broadband or better available in 100 percent of currently unserved and underserved off-grid locations.

- One Gbps symmetrical broadband is available to 100 percent of CAIs.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

13

Goal: Ensure sustainable, community-driven solutions across the entire State.

Objectives:

- Design and implement a BEAD grant program that invests in infrastructure and digital equity initiatives with community support.

- Develop and strengthen partnerships with community stakeholders to identify opportunities for the VCBB to support and coordinate initiatives.

Indicators of success by December 31, 2028:

- 100 percent of BEAD subgrantees have documented meaningful community support or partnerships.

Goal: Ensure high-speed broadband services and devices are affordable and advance digital equity for all Vermonters.

Objectives:

- Promote the ACP and other related resources for broadband affordability and adoption.

- Assist CUDs and town governments with strategies to ensure broadband affordability and accessibility for their communities, along with connecting communities with digital skilling and other related resources.

Indicators of success by December 31, 2028:

- 80 percent of households subscribe to fixed broadband.

- 60 percent of eligible households signed up for a broadband service subsidy (e.g., ACP).

- 95 percent of households own a laptop, tablet, or personal computer.

- 80 percent of population surveyed reports

confidence in their digital literacy.

- 80 percent of ACP eligible households own a laptop, tablet, or personal computer.

- All Vermonters can choose from multiple service plan options and price points.

- Indicators of success by December 31, 2030:

- 90 percent of households subscribe to broadband.

- 70 percent of eligible households signed up for a broadband service subsidy (e.g., ACP).

Goal: Enhance workforce development for broadband and the digital economy

Objectives:

- Increase capacity of education and training programs to develop the talent pipeline.

- Increase industry awareness and involvement in the opportunity created by these programs.

- Promote, target and recruit participants in Vermont.

- Support for the industry to create sustainable employment opportunities.

- Establish a roadmap of career possibilities for participants in the Workforce Development Programs.

Indicators of success by December 31, 2028:

- 100 new jobs in broadband created in Vermon

- 80% of new jobs in broadband filled by Vermont residents.

Goal: Improve socio-economic conditions across Vermont

Objectives:

- Ensure fair labor standards among subgrantees.
- Support workforce development opportunities in broadband related industries.

Vermont will monitor several key performance indicators across the State and in funded network service areas to gauge the indirect impact of broadband access and digital equity initiatives on socio-economic factors, such as:

Economic:

- Unemployment rate.
- Number of remote workers.
- Household income level.
- Population change (gain/loss).

Health:

- Utilization rates of telehealth services.
- Life expectancy.

Education:

- High school graduation rates.
- Student performance on standardized test scores.

Current State of Broadband and Digital Inclusion

Existing Programs

The VCBB was established by the General Assembly of the State of Vermont (VT General Assembly) in 2021 and is Vermont's statewide broadband office. It is housed under the Department of Public Service (DPS) and works in close coordination with other teams within the DPS that are responsible for implementing telecommunications policies and developing the State's Ten-Year Telecommunications Plan.

The VCBB was established by Act 71 (2021)—an act relating to accelerating community broadband deployment—to coordinate, facilitate, support, and accelerate the development and implementation of universal community broadband solutions. The VCBB develops policies and programs to accelerate community efforts that advance the State's goal of achieving universal access to reliable, high-quality, affordable, fixed broadband achieving speeds of at least 100 Mbps symmetrical. The VCBB administers the Vermont Community Broadband Fund for broadband infrastructure, convenes and coordinates broadband stakeholders and initiatives, promotes broadband-related workforce development programs, and is responsible for Vermont's BEAD and Digital Equity Plans.

It is the purpose of the VCBB and Vermont Community Broadband Fund to support policies and programs designed to accelerate community efforts that advance the State's goal of achieving universal access to reliable, high-quality, affordable, and fixed broadband.

The VCBB currently implements and

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

15

administers two grant programs established via Act 71: The Broadband Construction Grant Program and the Broadband Preconstruction Grant Program. Management and planning of these projects require successful coordination with each grantee, oversight of multi-year reporting requirements, and logistical and financial vetting. Table 2 describes activities performed by the VCBB.

TABLE 2. CURRENT ACTIVITIES THAT THE BROADBAND PROGRAM OFFICE CONDUCTS

Activity Name	Description	Intended Outcome(s
Administer Vermont Community Broadband Fund grants	The VCBB administers funding for broadband planning and infrastructure grants.	Advance universal service through community ownership and oversight.
Oversee coordination and facilitation of community broadband efforts	Convene and coordinate across stakeholders engaged in broadband efforts.	Resources maximized and best practices leveraged to expand universal broadband access.
Technical and administrative support for the 10 Year Telecommunications Plan	Provide expertise and support to the Department of Public Service (DPS) for the development of Vermont's 10 Year Telecommunications Plan.	Alignment of state telecommunications strategies and plans.
Increase industry awareness and involvement in the opportunity created by these programs	Engage private sector in broadband infrastructure plans and opportunities as well as workforce development strategies.	An engaged private sector and competitive ecosystem for high-quality broadband service and job opportunities.
Convene Digital Equity Core Planning Team	Convene a diverse set of stakeholders who work with underrepresented populations across the state to inform, coordinate, collaborate, and promote digital equity resources and initiatives.	An engaged and connected network of stakeholders serving underrepresented populations with digital equity resources.
Conduct Broadband Workforce Development Needs Survey	The VCBB, working with the Vermont Department of Labor, surveyed telecommunications companies in December 2021. The results of those surveys showed that companies were not aware of the amount of construction that Vermont was planning, nor were these companies prepared for the increased demand that would be placed on their workforce.	Understand anticipated labor needs and ways to inform efforts to proactively foster workforce development.

Activity Name	Description	Intended Outcome(s
Help ensure adequate capacity of education and training programs to develop the talent pipeline	The VCBB and NEK Broadband CUD began working with Vermont Technical College to develop a training program for existing telecommunication workers. This was well attended, with a total of 35 participants in three classes. The VCBB supports the Department of Labor and Vermont Technical College to develop and implement a Fiber Optic Broadband Apprenticeship program.	Three classes with a total of 35 participants
Promote, target, and recruit participants in Vermont to workforce development programs	Exploring a financing model for training costs and support services for participants to obtain training and secure career opportunities	Improve the affordability and accessibility of workforce development programs
Support for the industry to create sustainable employment opportunities	Work with employers and potential candidates to understand each employee's career options and goals	Improved alignment between employer needs and workforce development opportunities.

TABLE 3. RELATED ACTIVITIES MANAGED BY OTHER STATE OFFICES

Activity Name	Description	Intended Outcome(s
Ten-Year Telecommunications Plan	The Department of Public Service regularly develops and updates the State's 10 Year Telecommunications Plan.	Recommendations for the improvement and sustainability of the State's telecommunications infrastructure.
Statewide Broadband Mapping	The Department of Public Service regularly maps broadband infrastructure availability across the State.	Comprehensive understanding of access and gaps.
Broadband Occupational Needs Survey	The Commissioner of Labor conducts an occupational needs survey to determine workforce needs in the communications sector specific to broadband buildout and maintenance.	Evidence-based and stakeholder-driven workforce development initiatives.
FTTX: Incumbent Training Program	Vermont Technical College, in consultation with the Vermont Department of Labor, shall establish an incumbent training program for communications installers and technicians.	Existing employees' skills enhanced.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

17

Activity Name	Description	Intended Outcome(s
Support: Broadband Installer Apprenticeship Program[4]	The Commissioner of Labor, working with broadband employers, shall establish a federally registered apprenticeship program that meets one or more occupational needs related to the installation and maintenance of broadband networks.	Broadband workforce expanded and skills enhanced.

The VCBB is headed by a five-member board comprised of two members appointed by the Governor (a financial expert and the Chair); one member appointed by the Speaker of the House (an expert in broadband deployment in rural, high-cost areas); one member appointed by the Senate Committee on Committees (an expert in communications and electric utility law/policy); and one member appointed by the State's Communications Union Districts (CUD), which are organizations of two or more towns that join as municipal entities to advance the goal of reaching underserved and unserved addresses within their jurisdiction.

VCBB's staff are described below in Table 4.

TABLE 4. CURRENT AND PLANNED FULL-TIME AND PART-TIME EMPLOYEES

Current vs. Planned	Full-Time vs. Part-time	Position	Description of Role
Current	FT	Executive Director	Work with the Board in developing and implementing the State's broadband programs. Make recommendations to the Board for grant awards or other forms of financial or technical assistance. Retain or employ technical experts and other officers, agents, employees, and contractors as are necessary.
Current	FT	Deputy Director	Manage employees, strategic program planning, testify to legislature.
Current	FT	General Counsel	Provide legal advice and expertise.
Current	FT	Special Projects Director	Manage contracts, oversee GIS/mapping initiatives, facilitate interagency collaboration, and assist with outreach & engagement activities.

Current vs. Planned	Full-Time vs. Part-time	Position	Description of Role
Current	FT	Rural Broadband Technical Assistance Specialist	Provide outreach, technical assistance, and other support services to Communications Union Districts (CUDs) and other units of government, nonprofit organizations, cooperatives, and for-profit businesses for the purpose of expanding broadband service to unserved and underserved locations.
Current	FT	Outreach and Communications Manager	Manage press relations, write press releases, promote outreach and engagement.
Current	FT	Director of Regulatory Compliance & Risk Management	Oversees federal reporting, program compliance and risk management of grantees and contractors.
Current	FT	Digital Equity Officer	Oversee state's digital equity planning efforts and implementation of digital equity plan; build coalition of digital equity partners throughout State.
Current	FT	Broadband Project Developer	Oversee business plan review and financial models for CUDs and grantees. Conduct long-term financial planning for Vermont's broadband efforts.
Planned	FT	Grants and Contract Administrator	Administrative management of contracts and grants.
Planned	FT	Administrative Services Manager	Manage budget and perform other necessary administrative tasks.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

19

TABLE 5. CURRENT AND PLANNED CONTRACTOR SUPPORT

Current vs. Planned	Full-Time vs. Part-time	Position	Description of Role
Current	FT	Executive BEAD Five-Year Action Plan, BEAD Initial Proposal, Digital Equity Plan Consultants (BEAD Rural Telecom Contractor)	Assist the VCBB with planning and stakeholder engagement for the BEAD and Digital Equity Plans
Current	PT	Creative Finance Consultant	Assist with financial analysis and identifying additional funding sources
Current	PT	Fiber Optics Engineer Consultant	Assist with statewide universal service planning and project reviews
Current	PT	GIS Consultant	Assist with data analysis on broadband access across the State
Planned	PT	Asset Mapping Consultant	Data collection and mapping support
Planned	PT	Documentary and Outreach Contract	Planning, filming, and editing for documentary on Vermont's community-based broadband access solutions
To be confirmed	-	Capacity Grants	Municipal Organization Development Support
To be confirmed	-	Technical Workshops	Municipal Organization Development Support

20

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

Current vs. Planned	Full-Time vs. Part-time	Position	Description of Role
To be confirmed	-	Make-Ready Support	Municipal Organization Development Support
To be confirmed	-	Grant Writer	Support with securing additional grant funding

Existing Funding

On June 26, 2023, NTIA announced that Vermont will be receiving $228.9 million to expand access to broadband in the State as part of the BEAD Program. The BEAD Program provides $42.45 billion nationwide for planning, infrastructure development, and adoption programs.[5]

While BEAD dollars may be used for both availability and adoption related efforts, the VCBB is required to prioritize BEAD funding to extend high-speed broadband infrastructure to the approximately 50,000 that have been identified as either unserved or underserved based on the FCC's Broadband Serviceable Location Fabric (less estimated proposed RDOF and other federally funded areas), along with all identified CAIs lacking access to 1 Gbps symmetrical broadband connectivity.[6] **As discussed below, inclusive of Vermont's $228.9M BEAD allocation, the State has approximately $394.1M in existing funding which is available for extending high-speed broadband infrastructure to unserved and underserved locations and CAIs.**

For the purposes of quantifying existing funding availability, we are considering funding coming into the State of Vermont from state and federal sources only (i.e., this would not include any committed match funds by broadband service providers or planned deployments by providers not using either state or federally funded sources). Funding is considered "available" if it is not yet expended on or awarded to a specific project, or if the deployment of funding has already been considered against the approximately 50,000 identified as either unserved or underserved (e.g., RDOF funding would not be considered available, while ReConnect funding would, as ReConnect funding's planned deployment is not taken into account against the approximately 50,000 considered unserved or underserved). It should also be noted that this includes federal funds allocated to and under the control of the State of Vermont along with federal funds not under control of the State of Vermont (i.e., we are including ACP funding and ReConnect funding, although the State of Vermont does not have any direct control over these funding sources). For ease of analysis, we have broken out available funding into the categories of (1) approved deployment and non-deployment activities, (2) affordability programs, (3) public connectivity, and (4) planning, administrative, or overhead. A summary of the total available funding is outlined in Table 6.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

21

TABLE 6: AVAILABLE BROADBAND FUNDING BY BROADBAND CATEGORY

Broadband Related Category	Total	Committed/ Expended	Available	Remaining % of Available
Approved Deployment and Non-Deployment Activities	$559,185,933	$165,088,621	$394,097,312	86.7%
Affordability Programs	$41,770,080	$7,575,840	$34,194,240	7.6%
Public Connectivity	$18,000,000	$0	$18,000,000	4.0%
Planning, Administrative, or Overhead	$10,792,000	$2,721,919	$8,070,081	1.8%
Grand Total	$629,748,013	$175,386,380	$454,361,633	100%

Again, of these amounts, the State has approximately $394.1M in existing funding which is available for extending high-speed broadband infrastructure to unserved and underserved locations and CAIs. Furthermore, details of the individual funding sources and programs that roll up into these respective categories are outlined in Table 3. Any dollar figures denoted with an asterisk (*) should be considered a preliminary number. These amounts will be updated upon receipt of month-end reporting from the State's accounting team.

TABLE 7: DETAILED FUNDING INVENTORY

Source	VT to Use For	Description	Total	Committed / Expended	Available
NTIA Broadband Equity, Access, and Deployment Program	Approved Deployment and Non-Deployment Activities	Using the $233.8M projected BEAD allocation to Vermont, $228.8M is the maximum amount of funding available for last-mile connectivity less the $5M to be spent on planning	$223,913,019	$0	$223,913,019
NTIA Broadband Equity, Access, and Deployment Program	Planning, Administrative, or Overhead	Initial $5M of planning funds to be made available to Vermont	$5,000,000	$292,247	$4,707,753

Partnerships

Table 8 lists the VCBB's relevant community-based organizations and CAIs that have helped to inform broadband deployment and adoption planning. Further details on partners are discussed in subsequent sections including Implementation Plan and External Engagement.

TABLE 8: BROADBAND DEPLOYMENT AND ADOPTION PARTNERSHIPS

Partners	Description of Current or Planned Role in Broadband Deployment and Adoption
Adult Education and Literacy Network	VCBB Digital Equity Core Team Member and non-governmental organization.
Association of Area Agencies on Aging	VCBB Digital Equity Core Team Member and non-governmental organization supporting aging Vermonters statewide.
Association of Planning and Development Commissions	VCBB Digital Equity Core Team Member and statewide association of local regional planning commissions.
Chittenden County CUD	Supporting the most populated county in VT.
Community Action Partnership	VCBB Digital Equity Core Team Member and non-governmental organization focused on community development.
CVFiber CUD	Made up of 20 communities in Central Vermont, partnered with Waitsfield/Champlain Valley Telecom as the operator.
Department of Corrections	VCBB Digital Equity Core Team Member and governmental organization overseeing correctional facilities.
Department of Disabilities, Aging, and Independent Living	VCBB Digital Equity Core Team Member and government department supporting older Vermonters and Vermonters with disabilities.
Department of Libraries	VCBB Digital Equity Core Team Member and government department overseeing State libraries.
Department of Public Service	The Telecommunications and Connectivity Division within the DPS works to ensure that every Vermonter has access to quality, reliable, and affordable communications services. As a regulator, they provide oversight of companies' compliance with Vermont Laws and Public Utility Commission orders and rules governing their operations.
DVFiber CUD	Made up of 24 towns in mostly southeastern VT.

| Partners	Description of Current or Planned Role in Broadband Deployment and Adoption
ECFiber CUD	Vermont's first CUD, formed in 2008 to solve broadband issues in the Upper Valley. Today, ECFiber is approaching 7,000 customers on 1,600 miles of network in 23 of its 31 towns and has issued $64M in revenue bonds.
Equal Access to Broadband	VCBB Digital Equity Core Team Member and non-governmental organization focused on affordable access. Offers consulting to broadband providers on digital inclusion and provides direct support in ACP enrollment.
Lamoille FiberNet CUD	Made up of nine towns in Lamoille County, working to expand high-quality Internet access to the county's underserved homes.
Maple Broadband CUD	Partnered with Waitsfield/Champlain Valley Telecom as the operator.
NEK Broadband CUD	Has $23.5M in USDA ReConnect and Rural Business Development funding, including provider match for fiber buildout in the Northeast Kingdom.
Northwest FiberworX CUD	Supports 22 communities in northwestern Vermont.
Office of Racial Equity	VCBB Digital Equity Core Team Member and government department focused on racial equity.
Otter Creek CUD	Supports 18 municipalities in and near the Rutland Region.
Southern VT CUD	Partnering with Fidium Fiber to bring service to 14 towns in Bennington County.
US Committee on Refugees and Immigrants (VT)	VCBB Digital Equity Core Team Member and government committee supporting refugees and immigrants.
US Department of Housing and Urban Development (HUD)	VCBB Digital Equity Core Team Member and US government agency.
Vermont Center for Independent Living	VCBB Digital Equity Core Team Member and non-governmental organization supporting Vermonters with disabilities to live independently.
VT Communications Union District Association (VCUDA)	VCBB Digital Equity Core Team Member and non-governmental statewide association of CUDs.
Vermont Council on Rural Development	VCBB Digital Equity Core Team Member and non-governmental organization supporting rural economic development.
Veterans Outreach	VCBB Digital Equity Core Team Member and government organization supporting Veterans.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

27

Partners	Description of Current or Planned Role in Broadband Deployment and Adoption
Vermont Technical College (VTC)	VTC develop and implement a Fiber Optic Broadband Apprenticeship program in partnership with the Vermont Department of Labor, the Fiber Broadband Association, CUDs, and the VCBB[9]

Assessment: Assets, Needs, and Gaps

Vermonters are diverse, predominantly rural, and most consider themselves part of one or more underrepresented community (Figure 2). Data shows that many of these communities experience lower rates of broadband availability and adoption (as well as diminished access to other socio-economic resources and opportunities).[10][11]

FIGURE 2. DEMOGRAPHICS OF VERMONTERS

64.9% Rural

50.2% Female

21.6% Aging Individuals

10.4% People with Disabilities Under the Age of 65

10.3% Living in Poverty

8.4% Persons of Color

5.4% Veterans

5.3% LGBTQI+ Persons

0.4% Indigenous and Native American

0.2% Incarcerated Individuals
Broadband Access

Access Asset Inventory

Public Wi-Fi

In response to the urgent Internet connectivity needs created by the COVID-19 pandemic, Vermont partnered with the Information Technology Disaster Resource Center, Microsoft, and RTO Wireless to install Wi-Fi hotspots around the state.[12] As part of this project, the DPS prepared an interactive map of locations in Vermont where Wi-Fi access is publicly available (Figure 3). These sites are accessible at all hours from a parked vehicle on the road or parking lot. The map includes 1,327 public Wi-Fi access points throughout the state, including 295 state buildings, 301 schools, 244 town and city halls, 183 libraries, and 56 crowd-sourced sites.

FIGURE 3. VERMONT PUBLIC WI-FI ACCESS POINT MAP[13]

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

29

Public Libraries

Public libraries are a key asset for Vermonters to access the Internet. Vermont has 185 public libraries—the most per capita of any state in the US. As shown in Figure 4, they are distributed statewide and provide a low barrier for Vermonters to access the Internet. Many offer device lending programs and individual support from librarians in using computers and accessing the Internet.

FIGURE 4. PUBLIC LIBRARY LOCATIONS IN VERMONT[14]
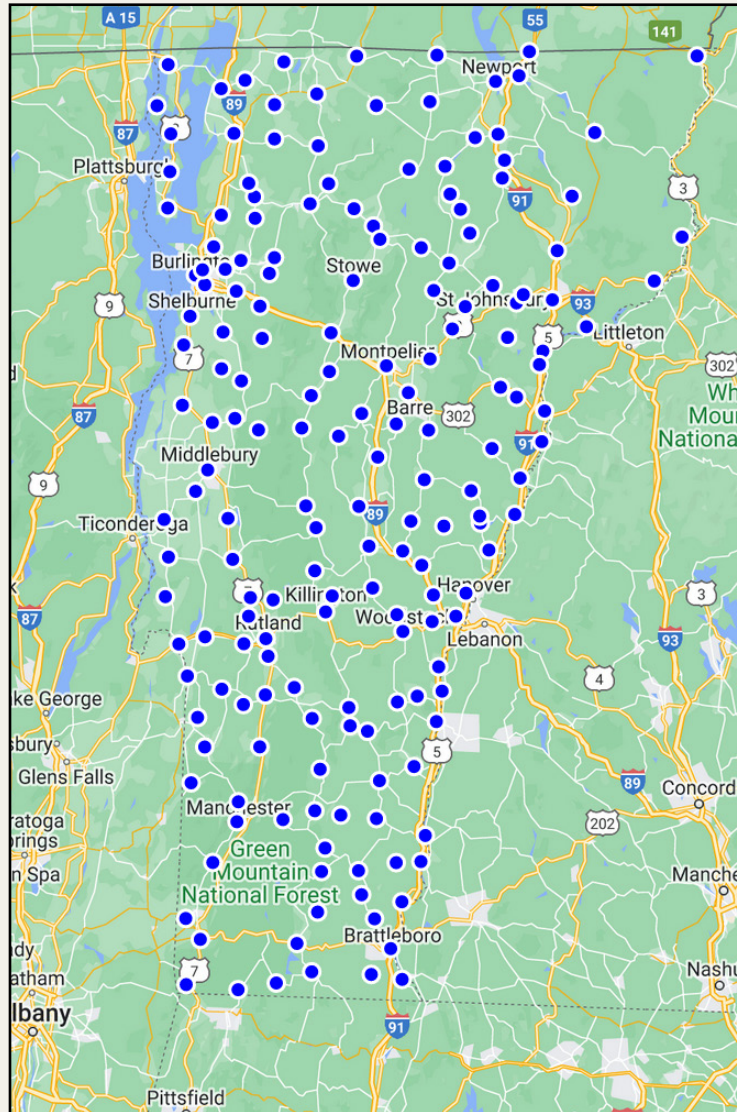

Community Anchor Institutions

Vermont has a strong tradition of community engagement, evidenced by its extensive network of community anchor institutions. These CAIs already are pillars of access and adoption throughout the state, and their importance as assets will only increase with time.

Access Needs & Gaps

Reliable high-speed broadband service is a high priority for many Vermonters. Many Vermonters share a sense of frustration with the lack of access to broadband and with experiences of unfulfilled promises of broadband infrastructure coming to their area. Vermonters describe broadband access as a necessity to earn a livelihood, access educational opportunities, and take care of their health. For some, it has become a deciding factor in choosing where to live or if they will be able to sell their house and move.[15]

In many parts of the State, reliable, high-speed Internet is not available. Because Vermont is a predominantly rural state with a dispersed population amidst hilly terrain and heavy tree foliage, it has higher than average costs to deploy broadband infrastructure.[16] In the absence of meaningful subsidies, ISPs have been unable to invest in the deployment of broadband facilities, especially in the more rural parts of the State. This has left Vermont with approximately 20% of households (70,034 out of 352,588 households) lacking access to 100/20 Mbps or better broadband connectivity.[17]

Figure 5 is taken from Vernonburg Group's Digital Equity Map[18] and shows census tracts across Vermont lacking access to the Internet at speeds of 100/20 Mbps ("underserved" areas). The darker the color, the higher the percentage of underserved households. One can see that the northeast and the southern sections of the state have the highest concentrations of unserved and underserved communities.
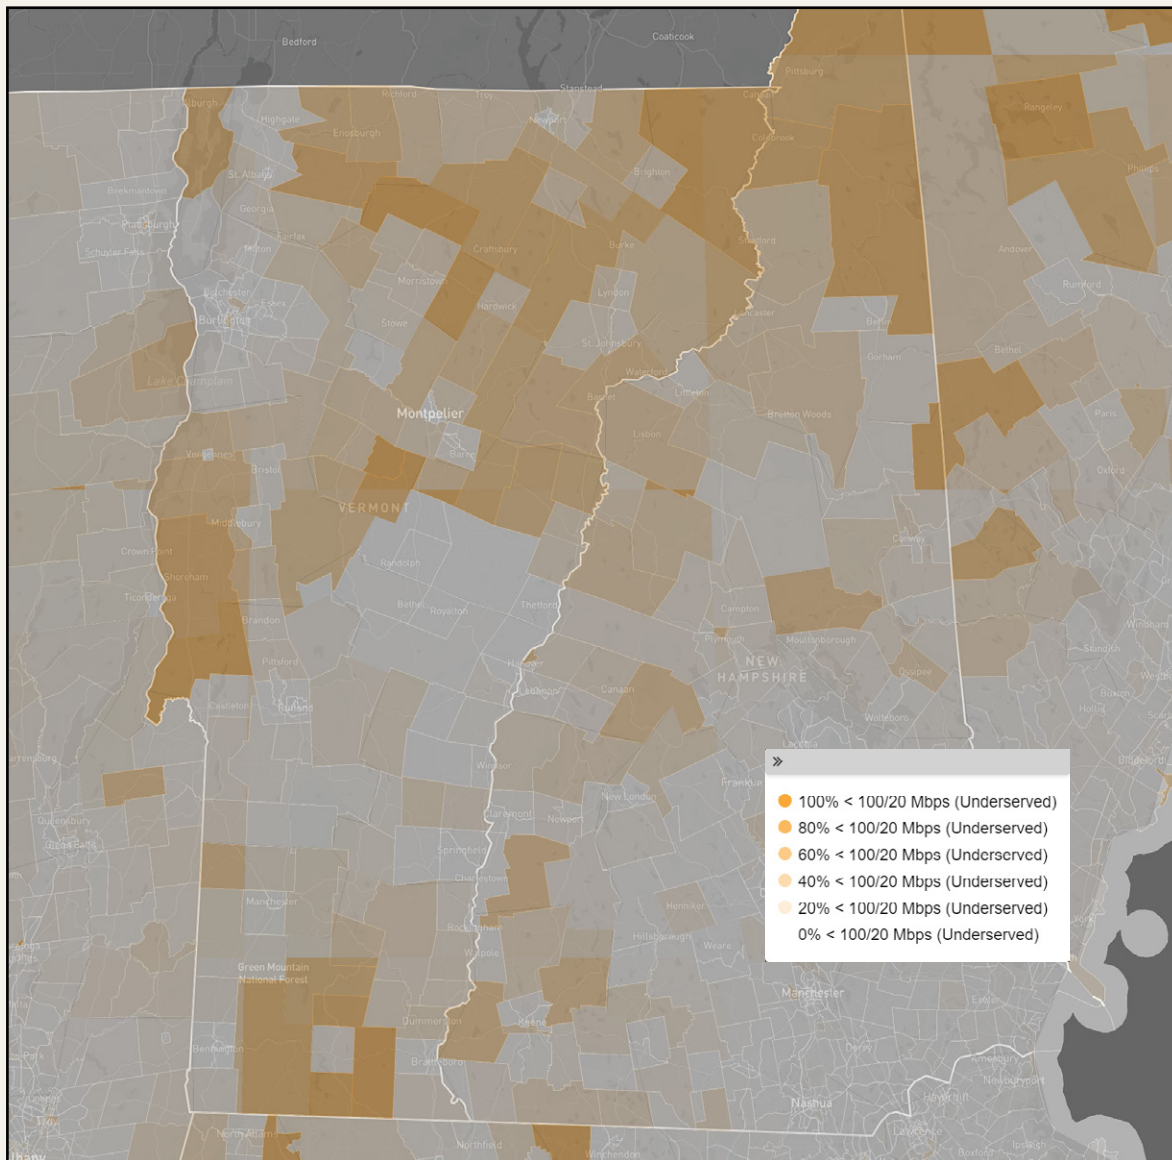

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

31

An intentional focus on equity is important in addressing the challenges of broadband access in Vermont. The availability of broadband in Vermont also correlates with income. Figure 6 demonstrates that poverty levels significantly correlate with overall access to cable and copper network deployments, especially at higher levels of poverty, while having little negative impact on fiber and fixed wireless network deployments. While cable and copper franchises and broadband network deployments have tended to concentrate in areas with higher population densities and higher average incomes, fiber broadband network deployments have tended to concentrate more in areas with lower population densities and lower average incomes, further analysis of this data is warranted. The VCBB recognizes the importance of analyzing data to determine acute community needs and to target resources most effectively.

32

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan
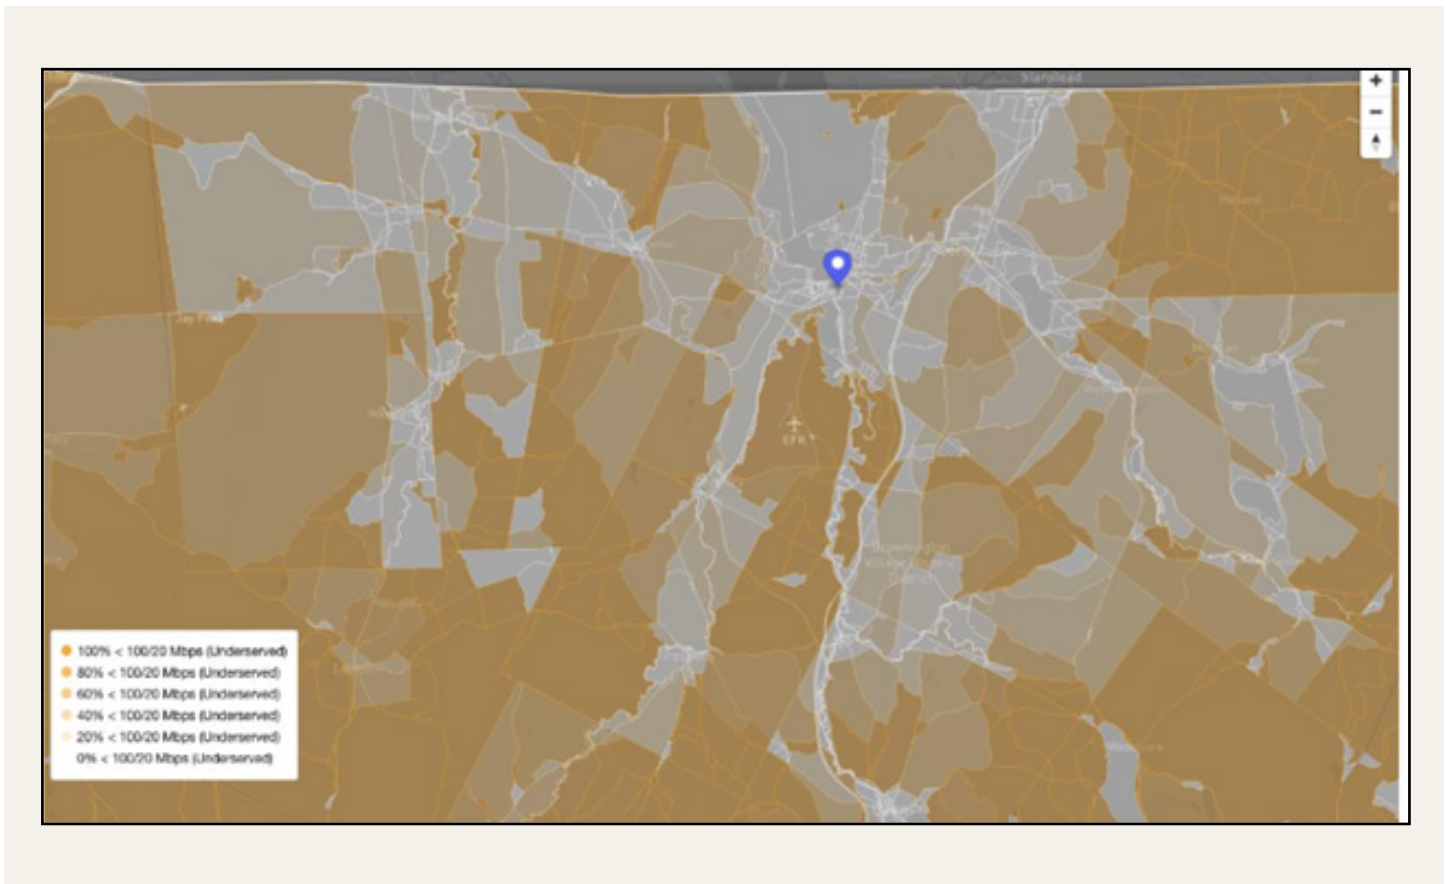

Broadband availability in Vermont can also be highly localized, with underserved locations surrounding areas with 100 percent broadband coverage. An example of this is shown in Figure 7, highlighting Newport, VT. In this example, one can see that 100/20 Mbps broadband is generally available in the center of Newport but is less available in the outskirts of Newport and in surrounding rural areas.

To address the problem of lack of broadband access, the Vermont Legislature passed several initiatives and funds to increase broadband service availability. Act 190 of 2014 increased the State's role as a convenor, coordinator, and funder to expand broadband access and mobile telecommunications across the State.

In 2015, the Vermont Legislature authorized the formation of CUDs, enabling two or more towns to join together to provide communication infrastructure to residents. Much like a water and sewer or solid waste district, CUDs allow towns to aggregate demand for a service and find efficiency by sharing operation of the district.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

33

> **"I live in one of the poorest towns in one of the poorest counties, and we need affordable access to broadband more than ever. Our area is struggling to keep up as services move to cloud-based systems. With a lack of reliable affordable Internet, we are unable to stay up to date. Even accessing news and events in our areas is difficult with no Internet. Our senior citizens are left alone and disconnected to the world."**
>
> –Responder to the public request for input on Vermont's
> BEAD Five-Year Action Plan and Initial Proposal

CUDs are critical entities for closing the digital divide in Vermont. The state has promoted and supported CUDs as a mechanism for expanding broadband across the state in the most rural areas; the infrastructure the state has built around CUDs and the progress CUDs have made makes it clear that CUDs will continue to play an important role in the telecommunications landscape in the state.

East Central Vermont Telecommunications District ("ECFiber") became Vermont's first operational CUD in 2016 and has since served as a model for other regions across Vermont seeking to address the growing needs of unserved or underserved areas. In 2018, for instance, twelve municipalities in Central Vermont followed ECFiber's lead to form CVFiber. By mid-2020, 27 towns in Vermont's Northeast Kingdom region voted to form NEK Broadband, which now covers 48 cities and towns and serves as the state's largest CUD.[19]

A growing number of municipalities across the state have chosen to join or form a CUD in the past six years. In total, nine districts representing 186 of Vermont's 246 towns and cities have formed[20], as identified in the following table and illustrated in the map below. There are many reasons municipalities choose to form or join a CUD, but perhaps the most valuable benefit for rural communities is the ability to achieve efficiencies of scale by aggregated un and underserved premises across towns. Less dense and isolated towns may not individually provide the profitability needed for ISPs to expand or provide adequate service to their area, nor may they have the leverage to appropriately scale for efficient solutions on their own. By aggregating demand and sharing resources, CUDs allow towns to gain more negotiating power and increase their appeal to potential investors.
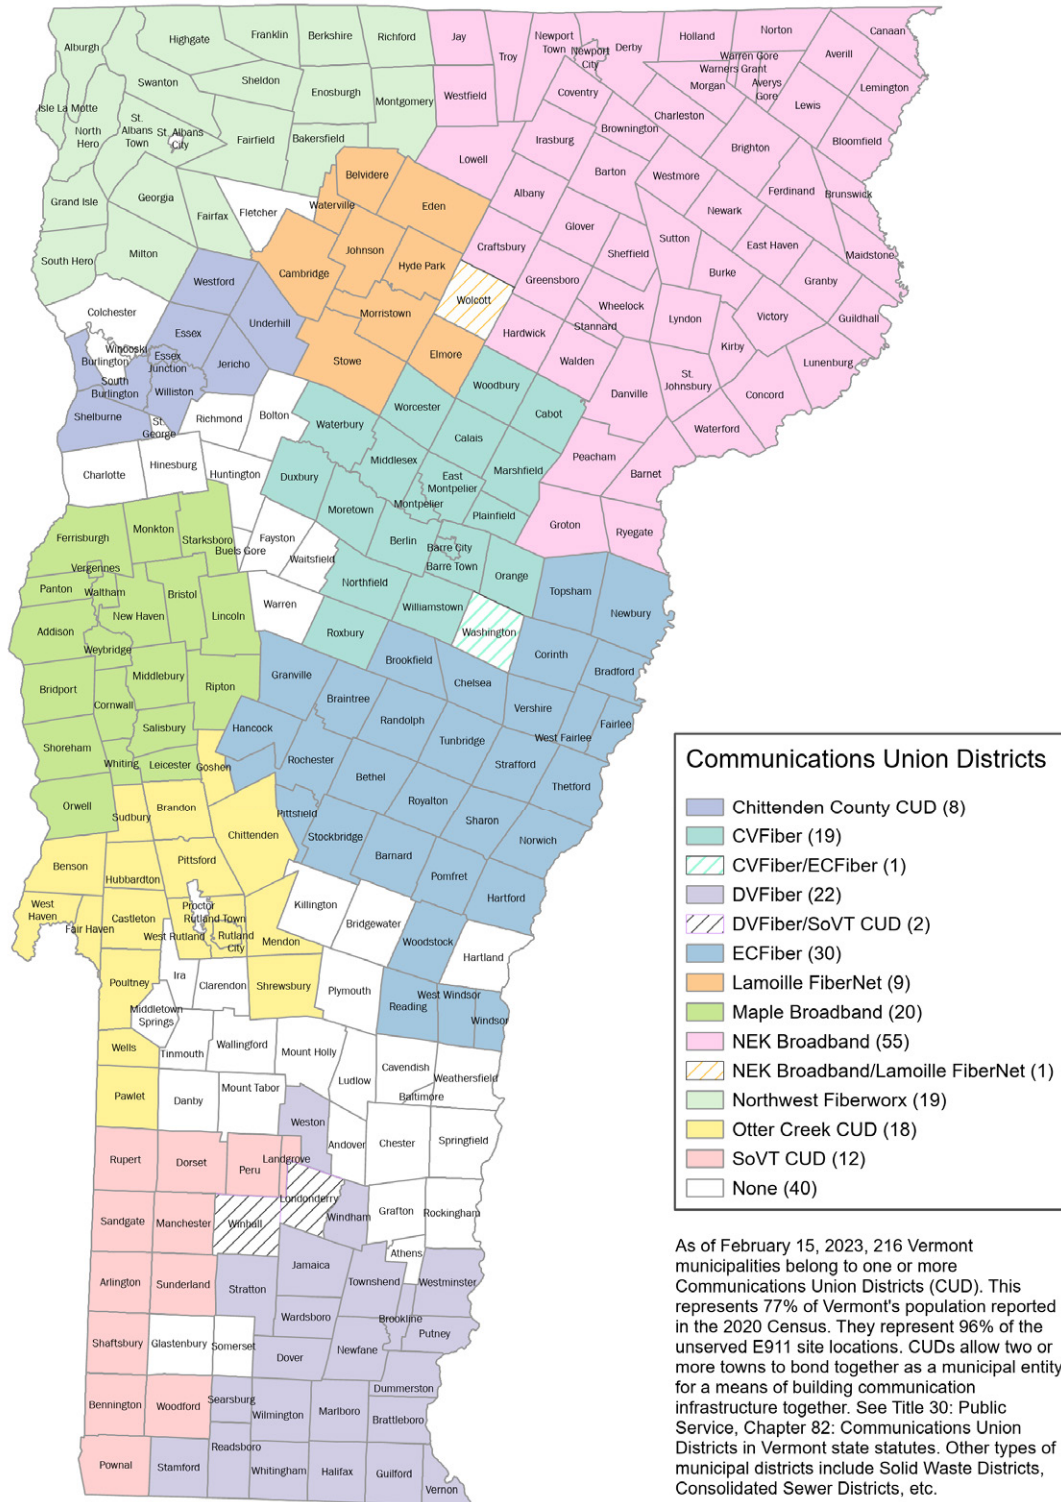

As these initiatives took root, Vermont also recognized the need for state-level coordination and support. It expanded the focus of the Department of Public Service on broadband, creating the VCBB in 2021 to administer funding, provide technical expertise, convene, and coordinate broadband initiatives across the State, and support the CUDs. Among other things, Act 71 of 2021 sets goals of providing every on-grid Vermont address access to fixed broadband with throughputs of at least 100/100 Mbps, created preconstruction and construction broadband grant programs, and provided access to broadband network deployment funds to CUDs, small ISPs, and ISPs working with CUDs.

The VCBB is working with CUDs and other ISPs to develop universal service plans and reduce barriers to business planning and capital expenditure for broadband deployments.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

35

Broadband Deployment

Deployment Asset Inventory

Vermont has prioritized broadband deployments since 2003. This was evidenced in 2004 when the first broadband grants were made available to help small wireless companies provide service to areas that only had dial-up access to the Internet.
Funding

As described in Section III.B. Existing Funding, there is currently $388.6M in available funding for approved deployment and non-deployment activities in Vermont. Vermont has a historic opportunity to establish a statewide broadband network that will benefit all Vermonters.

Existing Fiber

The first fiber optic cable in Vermont was completed in 2012, and in 2013 an 800-mile fiber-optic middle mile network was built in southern, central, and northeastern Vermont funded through the NTIA Broadband Technology Opportunities Program.[21] This allowed for 274 CAIs to become service-ready. Since then, fiber networks have expanded throughout Vermont and are currently concentrated in the middle of the state and higher population areas like Burlington and Stowe. The map in Figure 9 shows existing fiber and it is nearly the inverse of the map in Figure 12, which shows census tracts lacking access to 100/20 Mbps.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

37

FIGURE 9. EXISTING FIBER IN VERMONT (SOURCE: VERMONT DPS)

State-owned Assets

The State of Vermont owns and manages assets that can be used for broadband deployments. Such assets could be leveraged for BEAD-funded networks as in-kind contributions to reduce the cost of some projects. Buildings and towers can facilitate fixed wireless deployments. The Department of Public Service has made extensive data about these assets available to the public.

- Vertical assets. The State of Vermont has databases of State-owned or leased buildings[22] and towers.[23] There are at least 65 buildings that could host fixed wireless broadband infrastructure, according to DPS data.

- Utility poles: Data and maps for existing utility poles are also available publicly.[24]

- Rights of way: The State of Vermont has a publicly-available dataset on rights of way.[25]

- Fiber optic networks: In 2021, Act 71 transferred ownership of state-owned fiber under the Vermont Telecommunications Authority to the Communications Union Districts.[26] The VCBB Broadband Atlas describes deployment efforts underway in the CUDs.[27]

Communication Union Districts

Vermont's ten CUDs play a key role in broadband deployment. As community-focused institutions, they work to ensure residents and CAIs can access high-quality, high-speed broadband and hold providers accountable for the quality and reliability of that service. Some CUDs are involved with infrastructure development, service provision, adoption efforts, and community engagement. Many also offer digital equity and affordability programs.

Private Internet Service Providers

Private ISPs also play a key role in broadband

deployment as they are involved with infrastructure development, service provision, and adoption efforts. Many also offer digital equity and affordability programs. Several private ISPs, such as Consolidated Communications (Fidium Fiber) and Waitsfield and Champlain Valley Telecom, have partnered with CUDs to extend broadband service in their areas.

Workforce Development Program

Through its Workforce Development Program, the VCBB has made workforce planning and development one of its top priorities since its inception.[28] Since 2021, the VCBB has been developing and implementing an extensive Workforce Development Program that will ensure Vermont is able to meet the expected timelines for BEAD-funded projects. Preliminarily and in partnership with the Vermont Department of Labor, the VCBB administered a survey in December 2021 to understand the current state of the broadband deployment workforce, and to identify gaps prior to the disbursement of BEAD funds and the commencement of BEAD projects.

Once an understanding of the current state was developed, the VCBB identified next steps to address the gaps identified in the survey and has been working to address those gaps through a stakeholder-led and collaborative process. Activities have included:

- Established a Workforce Development Team, which has been meeting weekly since February 2022 and includes representatives from ISPs, construction companies, the Fiber Broadband Association, and initially the Communications Workers of America (CWA), but now the International Brotherhood of Electrical Workers (IBEW) because the CWA does not cover Vermont and New Hampshire in the field. The VCBB

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

39

also continued individualized conversations with many of these groups, including the IBEW, throughout the BEAD planning process, including during the development of the 5-Year Action Plan and Initial Proposal, to understand specific ways the VCBB could support these organizations and improve worker availability, retention, and satisfaction.

- VCBB reached out to 41 employers in New England and then created an advisory committee to represent the industry. The advisory committee included Fidium Fiber, Syracuse Utilities, and Eustis Cable.

- VCBB is setting up an apprenticeship program for fiber optic installers. There is only one nationally recognized apprenticeship program (that is for fiber optic installers). The training program includes outside and inside fiber technicians, flaggers and tree clearing. It is in development and expected to start this fall.

- VCBB is working directly with employers on employee retention, which has been historically deemphasized in the broadband deployment industry, and working to reach untapped pools of potential workers, such as women.

This is critical, because BEAD project deployments will place a significant strain on already limited worker pools in several key occupation groups. Given expected BEAD-generated demand, the following occupation groups expect to have at least 10% fewer skilled workers than are needed to meet demand:[29]

- Laborers and material movers (-10.2%)

- Software engineers (-15.4%)

- Trenchers (-11.4%)

- Master and stage electricians (-11%)

- Network architects and coordinators (-13.2%)

- Surveyors and drafters (-13.2%)

- Inspectors (-18.3%)

Vermont is committed to continuing its extensive workforce development and preparedness planning to address these shortfalls.

Example: Meeting the Broadband Workforce Challenge

Before the existence of the BEAD program and even before COVID, Vermont was experiencing worker shortages in the broadband sector. The fact that turnover in the fiber construction industry is high adds to the challenge. According to the 2021 Bureau of Labor Statistics, average annual turnover for construction was 56.9% and utilities was 54.9%. This means that a company will have to train and hire two people for every opening. With the large influx of infrastructure funds, the demand for skilled labor will severely exacerbate the existing problem.

In response to this challenge, the VCBB developed a Workforce Development Plan that outlines a framework and roadmap to address five major areas:

- Increase industry awareness and involvement in the opportunity created by these programs.
- Increase adequate capacity of education and training programs to develop the talent pipeline.
- Promote, target and recruit participants in Vermont.
- Support for the industry to create sustainable employment opportunities.
- Establish a roadmap of career possibilities for participants in the Workforce Development Programs.

Deployment Needs and Gaps

The BEAD program provides Vermont with a valuable opportunity to expand broadband infrastructure to unserved and underserved locations as well as CAIs lacking high-speed broadband. The first three objectives of BEAD funding are to expand high-speed broadband access to (1) unserved locations lacking access to 25/3 Mbps broadband; (2) underserved locations lacking access to 100/20 Mbps broadband; and (3) eligible CAIs. According to NTIA, "an Eligible Entity that can demonstrate it has a plan for bringing affordable, high-speed broadband service to all unserved and underserved locations within its jurisdiction may also allocate funding to non-deployment activities.[30]

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

41

Priority 1	Priority 2	Priority 3
Unserved locations lacking access to 25/3 Mbps broadband	Underserved locations lacking access to 100/20 Mbps	Connecting community anchor institutions 1/1 Gigabit Mbps
Figure 11 and Figure 12 highlight concentrations of unserved and underserved locations as identified by the current version of the FCC fabric data as of June 15, 2023, that will be eligible for BEAD funding. One can see where Vermont's unserved and underserved locations are most concentrated.

- 80 - 90
- 90 - 100
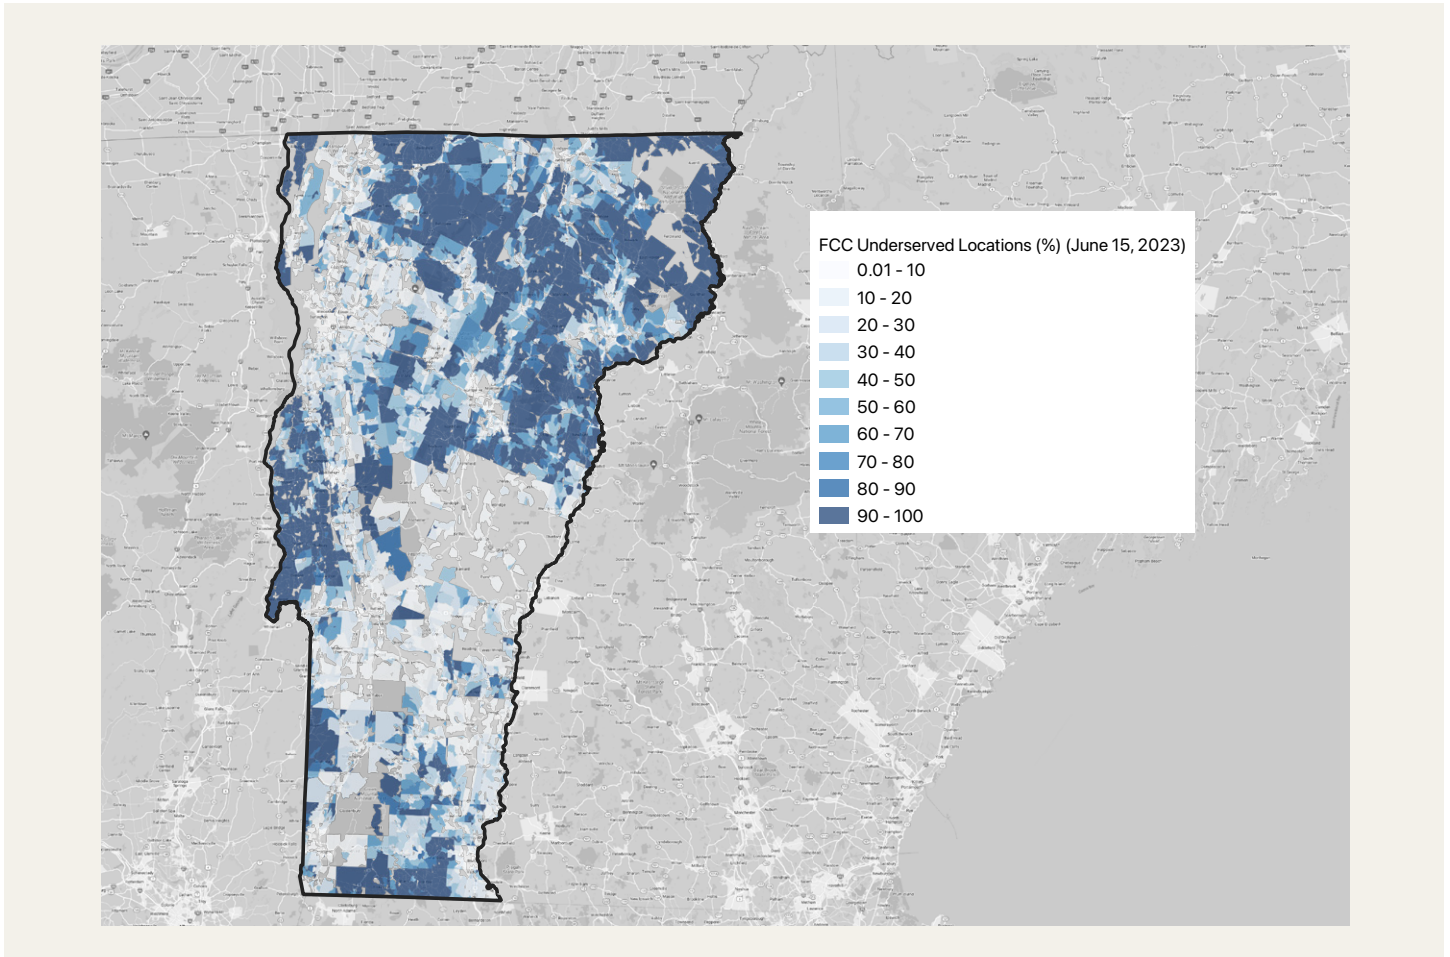

Vermont has a strong tradition of community engagement and CAIs have taken on a critical role in advancing digital equity. They are trusted resources in their local communities, providing important services and serving as valuable conduits of information about opportunities and resources for communities. For some people, CAIs offer the best, most affordable, or in some cases, only access to a computer and the Internet. Ensuring CAIs have reliable, high-speed Internet is one of the top priorities under the BEAD program and for the State of Vermont.

NTIA defines the term "community anchor institution" as "an entity such as a school, library, health clinic, health center, hospital or other medical provider, public safety entity, institution of higher education, public

housing organization, or community support organization that facilitates greater use of broadband service by vulnerable populations, including, but not limited to, low-income individuals, unemployed individuals, children, the incarcerated, and aged individuals."[31]

Through consultation with stakeholders, VCBB has adopted the statutory definition of "community anchor institution"—including schools, libraries, health facilities, public safety entities, public housing, and more—and added four more types of organizations: houses of worship, correctional facilities and juvenile detention centers, public access television station facilities, and public outdoor spaces. This list of types of organizations regularly serves as convening point and provides essential services to communities.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

43

Vermont's List of Community Anchor Institution Types

- K-12 schools
- Higher education institutions (such as University of Vermont, and Community College of Vermont)
- Workforce development organizations (such as VT Department of Labor locations, Working Fields, and Pathways VT)
- Adult education agencies (such as VT Adult Education, and Central Vermont Adult Basic Education)
- Libraries
- Health clinics, health centers, hospitals, and other medical providers
- Public safety entities (such as police departments, fire departments, and EMS headquarters)
- Public housing (such as housing and urban development-assisted housing)
- Neighborhood organizations and community centers
- Houses of worship (such as churches, synagogues, mosques, and temples)
- Local and/or state government buildings (such as town halls, city halls, town clerk offices, and courthouses)
- Housing shelters (such as COTS)
- Social service agencies (such as Age Well)
- Correctional facilities and juvenile detention centers
- Public access television station facilities
- Public outdoor spaces

The VCBB has identified specific CAIs using E911 building classification data that includes the following: (i) colleges, (ii) universities, (iii) K-12 schools, (iv) other education facilities, (v) hospitals and medical centers, (vi) clinics, (vii) nursing homes and long-term care, (viii) community and recreation centers, and (ix) libraries. VCBB is also working with the Departments of Education, Libraries, Housing and Urban Development, along with other organizations to gather data on locations and available broadband speeds at those locations. VCBB met with representatives from the different types of CAI organizations to understand their broadband and digital equity needs and resources, to request data they have on different locations, and to understand their current available broadband speeds.

44

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

CAIs currently lacking symmetrical Gigabit-speed broadband service will be classified as an "eligible community anchor institution," meaning they will be prioritized for BEAD subgrant-funded deployments. The Department of Public Service recorded all buildings that had 100/100 Mbps symmetrical broadband and higher. We assume that a building with access to 100/100 Mbps symmetrical broadband most likely has access to fiber and would be capable of upgrading to a 1/1 Gbps service. All community anchor buildings without access to 100/100 Mbps or higher service have been labelled as eligible for upgrade with BEAD funding. We have identified 676 community anchors, shown in Figure 13 that are potentially eligible for an upgrade. The VCBB will continue to analyze and refine this data to finalize its BEAD Initial Proposal and will integrate suggestions and feedback received through the External Engagement process.

The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

45
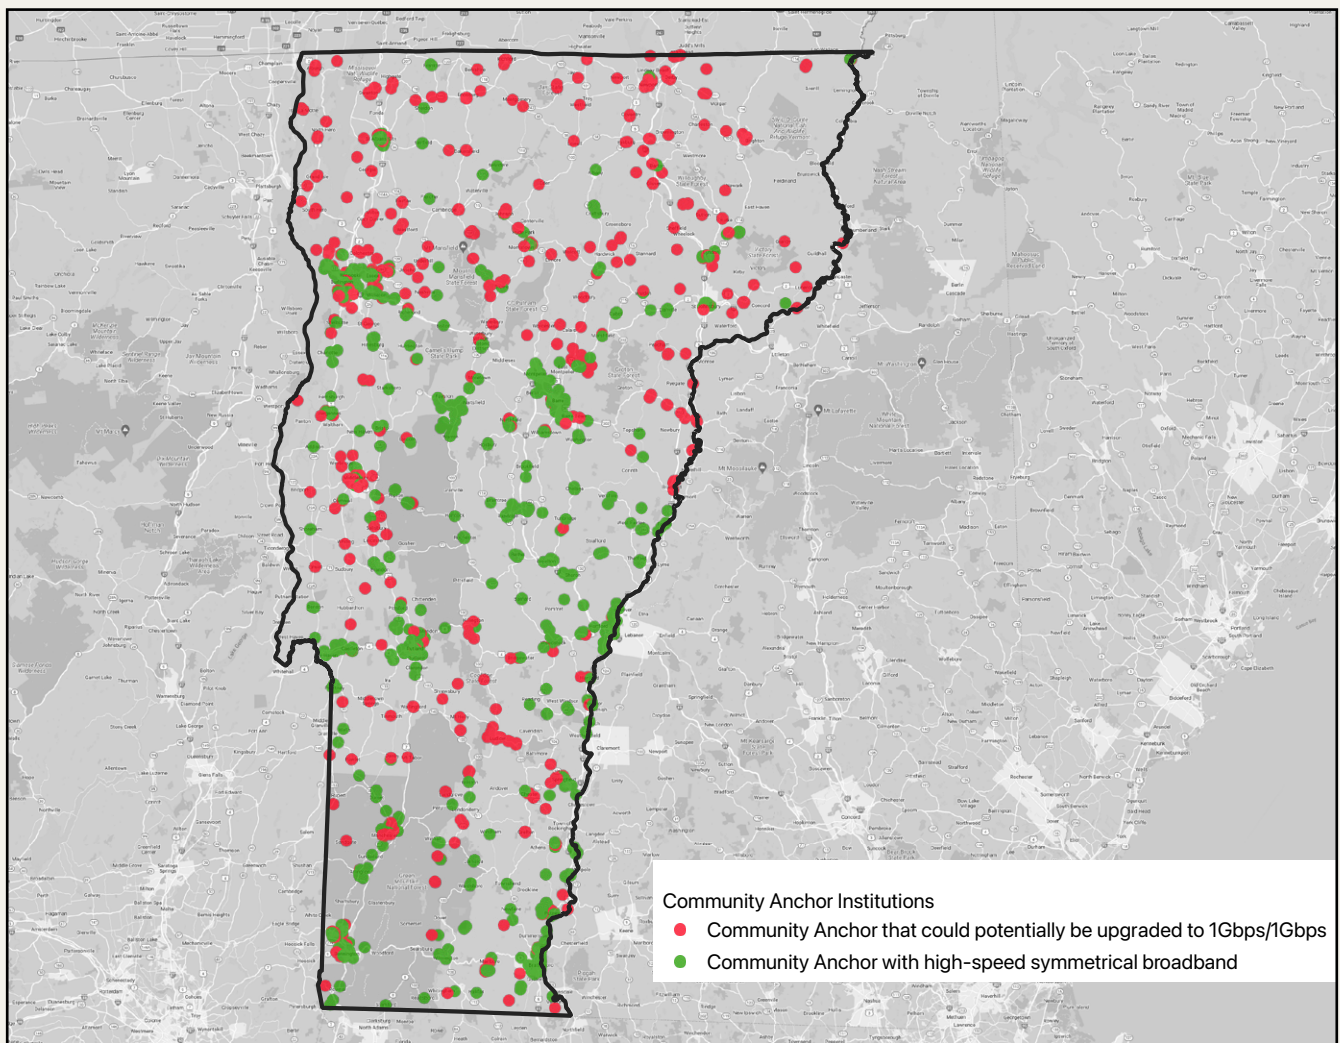

Broadband Adoption

Adoption Asset Inventory

Approximately 73 percent[33] of households in Vermont have a fixed broadband Internet subscription, which is close to the national average of 72 percent.[34] Areas where less than 60 percent of households have a broadband subscription are predominantly, though not exclusively, rural areas. There are several reasons why some households might not adopt broadband, including, among other reasons: affordability of plans and/or devices, service quality and reliability, digital literacy, and perceived need. That said, adoption is a key component of closing the digital divide.

Vermont State Board of Education has adopted the International Standards for Technology Education for student learning.[35] These standards are designed to prepare students to thrive in a constantly evolving technological landscape.

Employers and workforce development organizations are also key assets in broadband adoption efforts as they train employees with digital skills that they can use in their existing and future jobs.

Adoption Needs and Gaps

The number of households subscribing to fixed broadband, such as cable or fiber, is 190,887 out of 262,514 households (72.71 percent).[36] However, there are many areas where the subscription levels are substantially lower than this. Figure 14 shows census blocks in Vermont where 60 percent or fewer households have a fixed broadband subscription.

FIGURE 14. CENSUS TRACTS WITH LESS THAN OR EQUAL TO 25/3 MBPS AVAILABLE (UNSERVED) AND LESS THAN OR EQUAL TO 60% OF HOUSEHOLDS WITH BROADBAND SUBSCRIPTIONS (SOURCE: VERNONBURG GROUP DIGITAL EQUITY MAP)
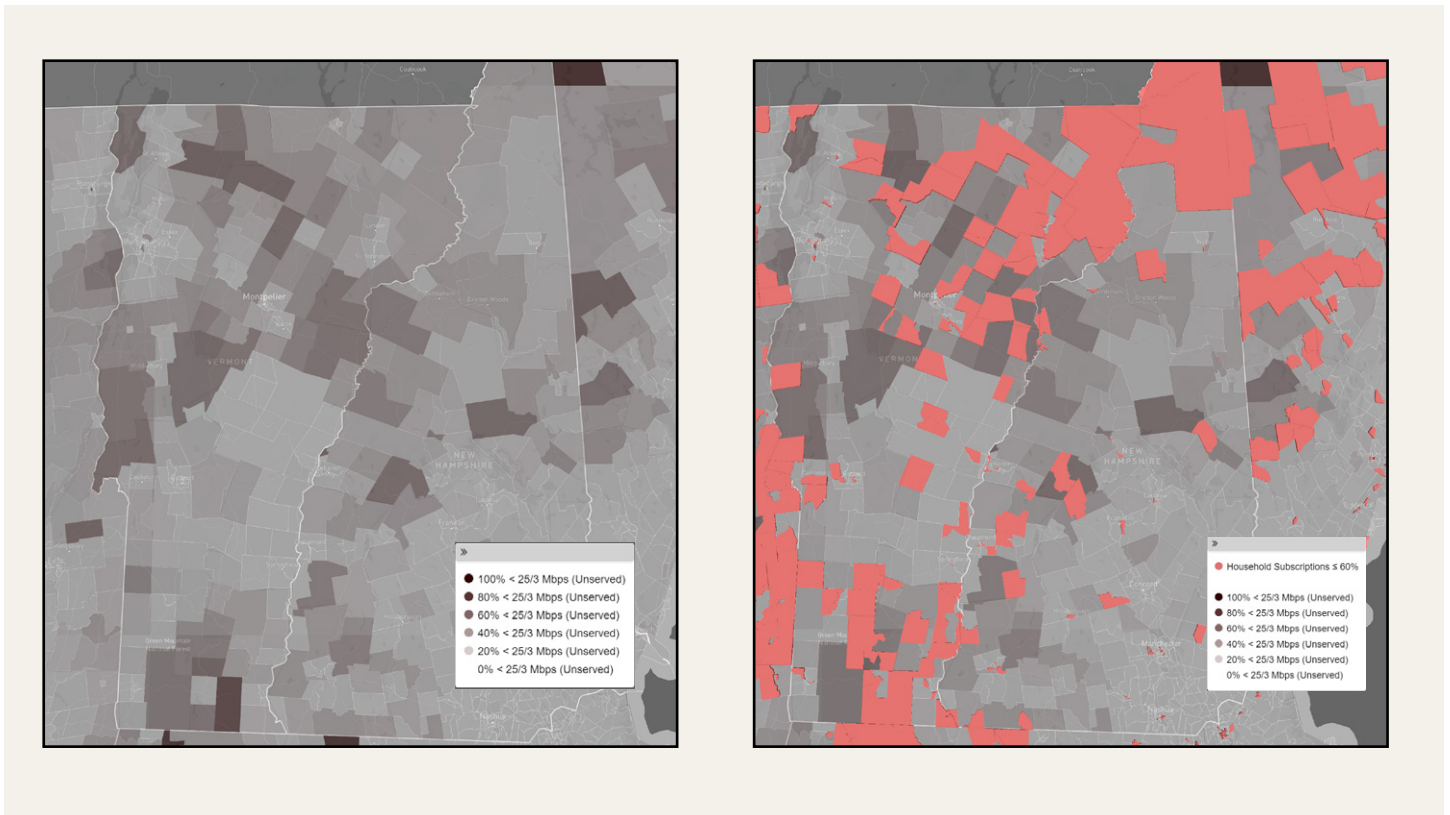

Utilizing Vernonburg Group's **Digital Equity Map**, we see that income is the most significant determinant of whether a Vermont household adopts fixed broadband (Figure 1515). This same pattern repeats across the US. Broadband adoption declines with poverty rates in a linear fashion, especially in urban areas. Adoption is also generally lower in rural areas due to a mix of lower broadband availability and poverty. Note that the size of the data points (or bubbles) is proportional to the population in the county and a linear trendline for fixed household broadband subscriptions versus poverty level was created for both urban and rural areas. The percentage of the population living below the federal poverty line and the percentage of the population subscribing to fixed broadband was sourced from the 2021 ACS (five-year average).

This data was collected prior to full implementation of the ACP. It is important that any plans to address the broadband adoption gap include a robust awareness and enrollment campaign for qualified households, as will be reflected in VCBB's forthcoming Digital Equity Plan.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

47

Differences in subscription rates among counties with similar rates of poverty might be attributable to differences in broadband availability, as well as localized variability in adoption rates within communities. Wider disparities among rural counties might reflect widely varying subsidization and business models.

This correlation between income and adoption appears even stronger for computer (desktop or laptop) availability in a household (Figure 16).

48

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

Computer Availability vs Poverty Level for Vermont
(Selected Census Block Groups Meeting Poverty Criteria Aggregated to County Sub District Level)
We see a similar impact of age on broadband adoption for lower-income communities in Vermont (Figure 17). A higher proportion of the lower-income population over the age of 60 in a census block translates to lower rates of home broadband subscription. More analysis would need to be conducted to assess the impact of age on broadband adoption as the current data from the US Census does not reveal non-adopters in specific age brackets at an individual level.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

49
Broadband Affordability

Affordability Asset Inventory

Affordability of Internet in Vermont is a key issue as around 18 percent of Vermont households live on incomes below 200 percent of the federal poverty line, the primary threshold for ACP eligibility. There are multiple organizations and programs in Vermont working to make broadband connectivity more affordable statewide.

Affordable Connectivity Program

This federal program provides a discount of up to $30 per month toward Internet service and up to $100 for a "connected device" purchase, provided that the "charge to such eligible household is more than $10 but less than $50 for such connected device." A connected device is defined by statute as a laptop, desktop computer, or a tablet.[37] There are currently 75 providers registered in Vermont that participate in the ACP, including both fixed and mobile service providers.[38] Details are shown by provider type in Table 9

50

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

TABLE 9: ACP PARTICIPATING PROVIDERS IN VERMONT

ACP Participants	Number
Fixed Broadband Service Providers	22
Mobile Broadband Service Providers	41
Providers Offering both Fixed and Mobile Broadband	12
Providers Offering a Connected Device Program	38

The ACP program came up frequently in stakeholder conversations during public listening sessions throughout Vermont, and the VCBB directed interested stakeholders to information and resources to assist them in applying. One frequent piece of stakeholder feedback came from Vermonters who are just slightly above the threshold to qualify for ACP who have trouble affording a home Internet subscription.

HUD has scheduled ACP enrollment events at public housing authorities in targeted areas across the State for the summer of 2023. Northeast Kingdom Community Action (NEKCA) was recently awarded a $500,000 ACP outreach grant from the FCC[39] and is coordinating a statewide campaign to increase ACP enrollments. **Equal Access to Broadband** also provides direct assistance to ACP applicants.

ACP enrollment remains somewhat low in Vermont compared to the number of Vermonters who are eligible for the program. Presently, 17% of eligible Vermonters are enrolled in ACP whereas nationwide numbers are approaching 40% of eligible households. The VCBB is working on more ACP awareness-building efforts in partnership with the Digital Equity Core Team they've assembled.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

51

TABLE 10: ACP PARTICIPANTS BY COUNTY

County Name	Total ACP Subscribers[40]	County Population[41]	Percent Subscribed	HH in Poverty	Median HH Income
Addison	757	37,578	2%	8%	$77,978
Bennington	1,433	37,392	4%	13%	$63,448
Caledonia	1,518	30,579	5%	13%	$55,159
Chittenden	3,995	169,301	2%	10%	$81,957
Essex	176	5,994	3%	14%	$48,194
Franklin	1,514	50,731	3%	9%	$68,476
Grand Isle	205	7,489	3%	8%	$85,154
Lamoille	502	26,090	2%	9%	$66,016
Orange	824	29,846	3%	10%	$67,906
Orleans	917	27,666	3%	13%	$58,037
Rutland	2,510	60,366	4%	11%	$59,751
Washington	2,455	60,048	4%	9%	$70,128
Windham	1,627	45,842	4%	11%	$59,195
Windsor	1,614	58,142	3%	10%	$63,787

Lifeline

Lifeline is another federal program that offers a monthly benefit of up to $9.25 for phone or Internet plans for eligible consumers.[42] Similar to the ACP, many more Vermonters are eligible for this program than are currently enrolled (See Table 11).

TABLE 11: LIFELINE SUBSCRIBER DATA FOR VERMONT

Subscriber Count (April 2023)	**8,010**
Eligible Households	**78,796**
Estimated 2023 Lifeline Participation Rate	**10%**

E-Rate

The E-rate program is a federally funded program providing discounts to schools and public libraries for their broadband services, Internet access, and related equipment. E-rate works by providing discounts averaging 60-80% on these services. In 2023, Vermont received just over $3 million to subsidize schools and public libraries in purchasing services and equipment.[43]

Rural Health Care Program

The Rural Health Care program is a federal program that provides funding to eligible public or non-profit health care providers for telecommunications and broadband services necessary for the provision of health care.
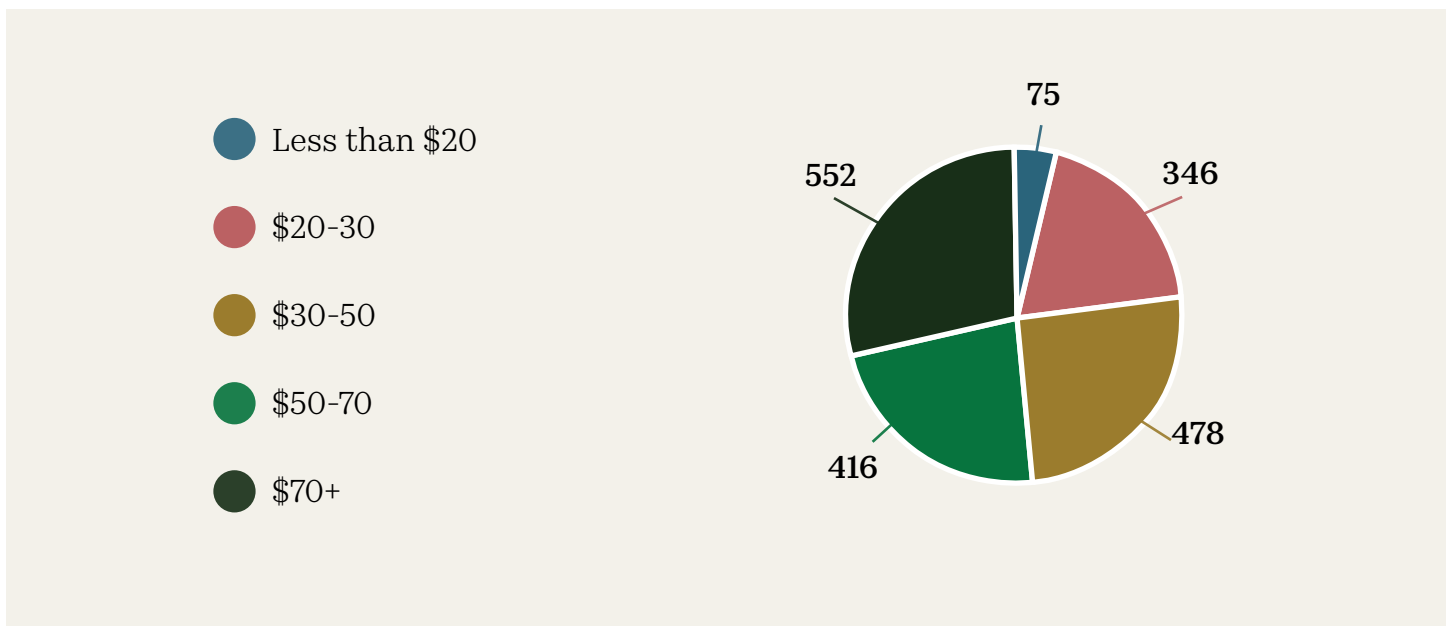

Affordability Needs and Gaps

According to Education SuperHighway, 23,260 Vermont households have access to the Internet but cannot afford it.[44] In a public survey conducted by the VCBB to gather input for developing Vermont broadband and digital equity plans, 21 of the 58 responders who do not have a home Internet subscription state that the primary reason for not signing up for service is because the cost of Internet is too high. Out of 1,997 total survey responses, 990 responded that the cost of Internet service is too high to a question about their experiences with Internet services (the second and third most popular responses were that the Internet was too slow—926 responses—and that the Internet was unreliable—795 responses).[45]

According to the Vermont Ten-Year Telecommunications Plan (2021), monthly broadband service charges for speeds of at least 100 Mbps down start at $34.99.[46] According to a survey conducted by the VCBB as part of its BEAD planning process, a 52% of respondents pay over $50/month (Figure 18).

FIGURE 18. SURVEY RESPONSES REGARDING MONTHLY COST OF INTERNET SERVICE

- Less than $20

53

Yet, Vermonters are not maximizing the use of broadband affordability programs currently available. Compared to a nationwide participation rate of close to 40 percent, only 17 percent of eligible Vermont households have enrolled in the ACP. The rate of enrollment has been increasing, however. The VCBB's public survey included questions about awareness of the ACP and reasons for signing up or not. Of the survey respondents who had heard about the ACP, 442 or 52% of survey respondents report signing up. When those who knew about the ACP but had not enrolled were asked why they had not signed up, most (314 out of 395 respondents who provided a reason said they thought their income was too large, but a small number also responded that they did not know how to sign up (54) or that the process to sign up was too difficult (27). 54 percent of respondents (1,005 out of 1,859 who answered the question) had never heard of the ACP, and 240 survey respondents (as of July 10, 2023) requested more information.

The VCBB is actively working with partners to promote awareness of the ACP program and how to sign up. It intends to work with partners and stakeholders such as NEKCA to better understand the barriers to adoption of the ACP program.

Digital Equity

Digital Equity Assets

The VCBB Digital Equity Core Team

The VCBB has assembled a Digital Equity Core Team that encompasses organizations that work directly with underrepresented groups across the State of Vermont. Members of this team are listed in Section III.C. Partnerships. There are many examples of digital equity in the work that each of these organizations do, but a few examples are listed here:

- The Department of Libraries supports Vermonters in connecting to the Internet via device lending programs and training and support programs at libraries statewide.

- The State of Vermont Department of Disabilities, Aging, and Independent Living sponsors an Assistive Technology Program which offers services for both individuals and organizations statewide. These services include: 1-1 meetings with Assistive Technology (AT) specialists, AT Training and Presentations, a funding guide, a free equipment loan program, an exchange to buy and sell used AT equipment, and more.

- Vermont Center for Independent Living coordinates a statewide equipment distribution program that loans telecommunications equipment to enable low-income Deaf, Deaf-Blind, Hard of Hearing, and individuals with physical disabilities to communicate by telephone.

- Equal Access to Broadband offers consulting on inclusive policies and practices for broadband service providers and provides individual support in signing up for the ACP.

- VT Veterans Outreach supports Veterans in accessing a VA sponsored Telehealth program that helps Veterans who don't have Internet service or an Internet-connected device get the access they need for telehealth care.

Other Digital Equity Assets

- Tech 4 Tomorrow, a 501(c)(3) based in Williston, VT, empowers individuals and organizations by providing affordable technology, supporting skills training, and enabling virtual opportunities through various local, state, and national collaboration efforts to help individuals and organizations reach their goals.

- Vermont Association for the Blind and Visually Impaired offers training on devices and accessibility features.

- The VT Association of Area Agencies on Aging (V4A), which operate statewide, offer various programs on device usage and digital skilling to older Vermonters. One of these programs is a partnership with GetSetUp, an online community for adults 55 and older to learn and connect with others. V4A has an eLearning channel for Vermonters to take free classes on various topics, including technology and digital skills.

- ReSOURCE Vermont is a registered Microsoft refurbisher, they offer full-service computer repair and sales of refurbished devices. They receive donations of used computers from schools and businesses and operate an apprenticeship program to train computer refurbishers. These devices are then given to low-income Vermonters through their Essential Goods program or sold in stores at a discount.

- Computers for Change is an organization in Burlington that works to provide affordable laptops to the community. They refurbish laptops and sell them at a discount or donate them to schools, nonprofits, and charities. They also offer trade-in credit for used, old, and broken laptops to put towards a refurbished one from their store, and offer free transfer of data from the old machine to the new one.

- PCs for People is a nation-wide non-profit that refurbishes laptops and sells them at a discount to income-qualifying households, or donates them to schools, nonprofits, and charities.

- The Northeast Telehealth Resource Center hosts Telehealth Virtual Office Hours for Vermont clinicians on the first Wednesday of each month. Providers can have their questions answered about how best to implement telehealth services or sustain their existing programs.

- The US Committee for Refugees and Immigrants offers integrated computer skills training and English language education classes. As part of their resettlement and placement programs, they help set up Internet service at individuals' residences. They also assist with ACP enrollment.

Digital Equity Needs and Gaps

NTIA defines digital equity as "the condition in which individuals and communities have the information technology capacity that is needed for full participation in the society and economy of the United States" (see Section:

Definitions). In addition to broadband access, this includes access to connected devices (e.g., a laptop) and the skills to meaningfully use them.

The Microsoft Digital Equity Dashboard evaluates Vermont counties against Microsoft's Digital Equity Index, balancing the following factors: (1) 25-year-olds without a high school degree, (2) households without a desktop or laptop, (3) households without Internet access of any type, (4) percent of people not using Internet at broadband speeds, and (5) percent of annual median income spent on broadband. The darker the blue shade, the less digital

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

55

inequity. The deeper the orange color, the higher the digital inequity. Coinciding with broadband availability data, the Northeast region of the State faces some of the greatest digital inequity.

Microsoft's Digital Equity dashboard suggests that statewide, 18.5 percent of Vermonters lack a broadband subscription at home while only 47.2 percent of Vermonters are using the Internet at broadband speeds.[47] Additionally, 18.8 percent of Vermonters lack access to a computer at home.[48] This number is similar to NTIA's estimates that only 70.7 percent of Vermonters use a desktop, laptop, or tablet

FIGURE 19. DIGITAL EQUITY SCORING BY COUNTY IN VERMONT (SOURCE: MICROSOFT DIGITAL EQUITY DASHBOARD)
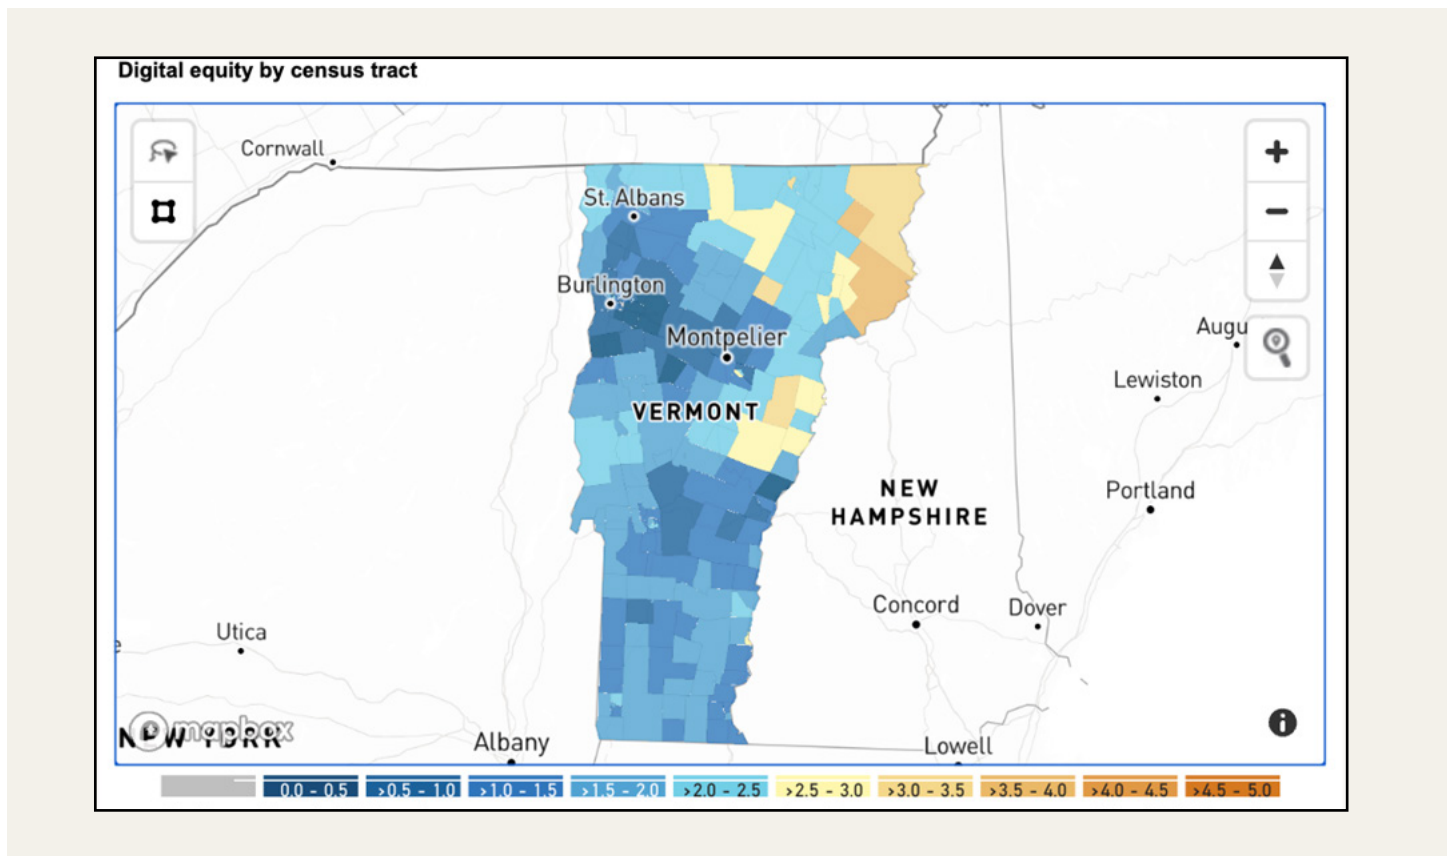

computer (slightly above the national average of 68.5 percent).[49]

Results from the VCBB's public survey indicate Vermonters face a full range of challenges in meaningfully getting connected online. Cost and reliability of Internet service were identified as the most significant challenges facing Vermonters. Only 23 percent of the VCBB's public survey respondents identified affordability of devices and confidence in digital

skills as a challenge to broadband adoption. The primary barriers are the cost and quality of Internet service.

FIGURE 20. SURVEY RESPONSES REGARDING EXPERIENCES USING THE INTERNET

Survey Responses to the Question: "Please select any statements that you agree with regarding your experience with Internet use."
(As of July 10, 2023)
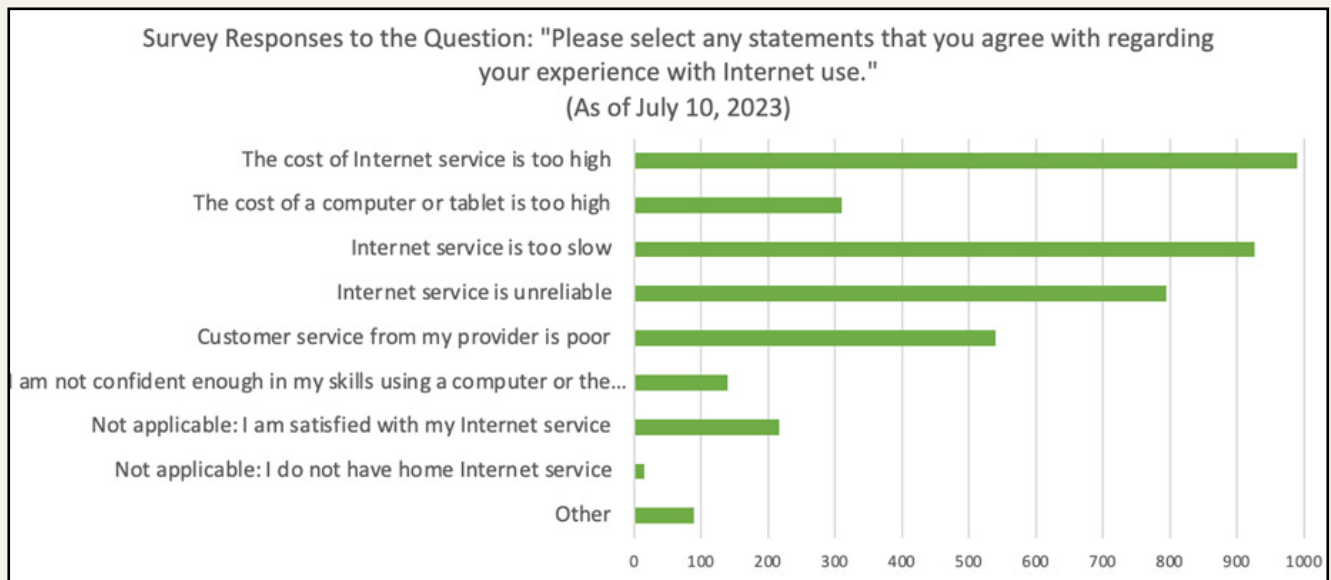

Responses to both the public survey and the request for input on the BEAD Five-Year Action Plan and Initial Proposal, as well as direct discussions with the public, highlighted a general lack of awareness of resources for digital equity. There is an opportunity for the VCBB and partners to do more extensive outreach about what programs and resources can help people get access to affordable computers, assistive technology, digital skilling opportunities, and more.

When surveyed about digital skilling and confidence, respondents mostly rated themselves as average to expert in their confidence with a range of basic online activities. Very few survey respondents rated themselves as a beginner or completely lacking in these basic skills. Nonetheless, during the external engagement process informing the development of this plan, we heard from organizations serving underrepresented communities including formerly incarcerated individuals, elderly populations, and migrant farm workers that digital literacy is a significant challenge and resources are in high demand. Staff of community organizations have found technical support and digital literacy training becoming an increasingly significant part of their roles. This supports the need to highly targeted interventions to groups and individuals in need of digital literacy support.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

57

FIGURE 21. SURVEY RESPONSES REGARDING EXPERIENCES USING THE INTERNET
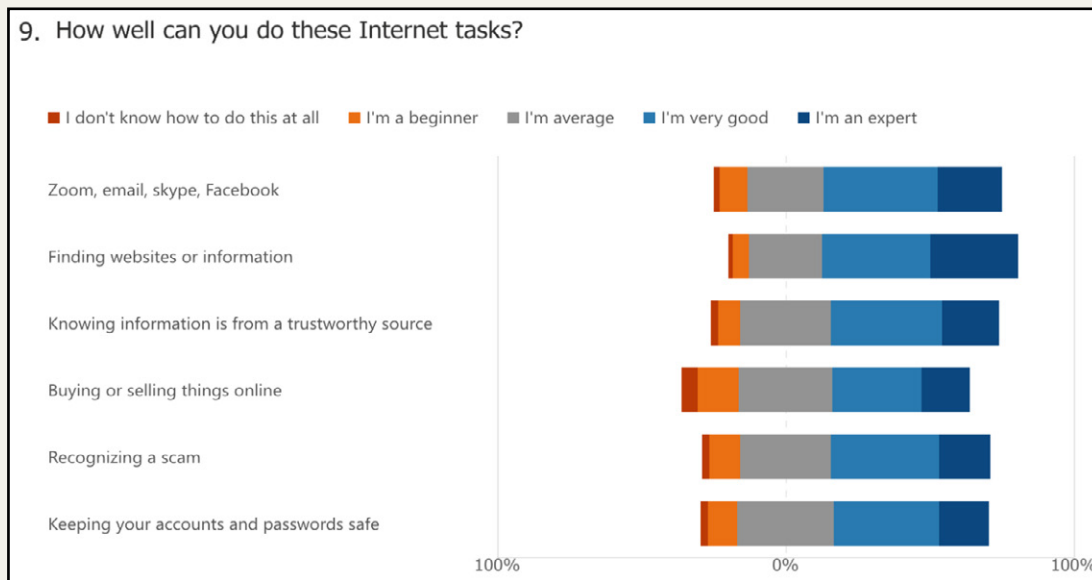

Issues to Overcome for Successful Implementation

While all reconcilable, barriers or obstacles to implementation of the BEAD Program in Vermont can be categorized in three ways: (1) institutional, (2) legal and regulatory, and (3) economic.

58

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan
Institutional challenges faced by the VCBB include:

- Ensuring that CUDs have the technical, managerial, and financial capacity to deploy or oversee deployment of reliable broadband networks, as well as deliver affordable services in a commercially sustainable manner.

- Effectively serving and advancing the needs of a wide range of historically marginalized communities that may face pre-existing institutional barriers.

- Maximizing the effective use of funding when data and information about broadband coverage is continuously changing and reporting from ISPs is challenged by the public or other ISPs.

Legal and regulatory:

- Balancing compliance with federal statutory requirements to conduct an open, fair, and competitive subgrantee selection process while staying true to the municipal CUD structures established by the State Legislature.

Economic:

- Challenging terrain (hills and mountains combined with dense foliage result in high costs to deploy infrastructure) and low population density (limited potential subscriber base) have hindered broadband deployments in the past.

- Low population density (limited potential subscriber base) can impede the financial and operational sustainability of service provision for some providers and some areas. Even with funding support for capital expenditures, some providers are concerned about a sustainable business model for operating expenses.

- Supply chain challenges and labor shortages are delaying broadband network deployments and increasing project costs. Moreover, inflation is increasing the cost of inputs, resulting in cost overruns.

- Smaller or newer providers may lack the economic capacity to secure irrevocable letters of credit, contribute 25 percent matching funds, and offer low-cost service pricing. These economic hurdles will disadvantage them in the competitive process required by NTIA.

- Several funding sources exist, yet the VCBB has found it challenging to track all the broadband infrastructure and digital equity funding sources, eligible funding recipients, and how and where those funding programs are being allocated. Implementation of management information systems will enable the VCBB to better maximize the use of its own allocations to address gaps and accelerate broadband access and adoption.

- Broadband and telecommunications plans have recommended State subsidies to ensure affordability of broadband service. Yet, the State has only instituted a temporary subsidy using COVID relief funds. Permanent subsidy programs, such as permanent support for the ACP, will be needed to ensure that broadband services and computing devices remain affordable for low-income households.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

59

Implementation Plan

The following section describes the VCBB's plan to implement its BEAD program and achieve its objectives for broadband access and digital equity, including the stakeholder engagement process, strategy for broadband affordability, priorities and planned activities, estimated timeline and cost, alignment to other local plans, and further technical assistance needs anticipated.

Stakeholder Engagement

Extensive and inclusive external engagement has been central to the process of developing this plan and will continue to be critical in its implementation. The State has been intentional in crafting an equitable engagement and outreach process, which has been designed to engage all segments of Vermont's population. This comprehensive effort includes various forms of direct engagement with stakeholder organizations, including non-profits, local government officials, and broadband service providers, as well as extensive outreach efforts to the general public. Principles utilized during the development of this plan were:

- Conduct inclusive stakeholder engagement with intentional outreach to underrepresented communities.

- Build on prior work analyzing the State's broadband needs, lessons learned, and existing policies related to broadband and digital equity.

- Be data-driven: use data and evidence to guide prioritization and decision-making.

- Ensure accessibility: The stakeholder engagement plan as well as subsequent materials and surveys were crafted in consultation with a Disability and Accessibility Strategist.

These efforts are described in detail below.

Process

Initial Planning and Establishment of the Digital Equity Core Planning Team

The idea that the content of Internet for All plans should be guided and informed by public feedback has been central to the VCBB's strategy since these programs were announced. Prior to commencing the plan development process, the VCBB assembled an advisory working group, called the Digital Equity Core Planning Team. This team was designed to include groups working with all NTIA's underrepresented communities (as well as some particularly relevant to Vermont). Participants were selected based on their experience working directly on digital equity and broadband issues and their engagement with underrepresented communities statewide. Many of the representatives to the Digital Equity Core Planning Team are also members of the underrepresented communities that they work with, further underscoring their deep understanding of the experiences of these segments of Vermont's population. This group has been meeting on a biweekly basis since January 2023, and advised on the development of the external engagement process to ensure that it was equitable and would be effective in reaching all segments of Vermont's population. The group also has played a crucial role in the implementation of that process and in reaching members of underrepresented communities. Members of the Digital Equity Core Planning Team include:

- **The Adult Education and Literacy Network** provides free basic literacy and math instruction, high school diploma and General Educational Development completion, and English Language Learning

classes.

- **The Association of Area Agencies on Aging** represents five non-profits across the State that help aging individuals access caregiver support, meal programs, transportation, and other services.

- **The Association of Planning and Development Commissions** represents Vermont's 11 regional planning commissions, which act as a link between municipal affairs and state government.

- **The Community Action Partnership** is a network of five non-profit organizations that provides programs and services to low-income Vermonters.

- **The Department of Corrections** is a government agency that oversees six prisons across the state and 12 probation and patrol offices.

- **The Department of Disabilities, Aging, and Independent Living** is a government agency that offers services for Vermonters over 60 and individuals with physical or developmental disabilities.

- **The Department of Libraries** provides services to public and school libraries and houses the Audio, Braille, Large-print, and Electronic-books and Vermont State Libraries.

- **Equal Access to Broadband** works to make broadband affordable for Vermonters.

- **The Vermont Office of Racial Equity** partners with non-profits and local, state, and federal government to advance equity and social justice.

- **The U.S. Committee on Refugees and Immigrants** provides education, workforce development, translation, resettlement, and integration services to Vermont's newcomers.

- **The U.S. Department of Housing and Urban Development** administers programs to ensure fair and equal housing opportunity for all.

- **The Vermont Center for Independent Living** supports individuals with disabilities so that they can live in their own homes and make their own decisions.

- **The Vermont Communications Union District Association** serves to unite the interests of Vermont's growing municipal Internet networks, devising ways to share resources and voicing CUD consensus on critical policy issues.

- **The Vermont Council on Rural Development** is a partnership of national, state, and local non-profit, government, and business leaders that works to address issues facing rural communities.

- **The Vermont Veterans and Family Outreach Program** is part of the Office of Veterans Affairs and helps veterans and their families obtain the benefits they have earned through their service.

Once this team was established and the VCBB selected a consulting team that would support plan development and drafting, the VCBB developed its comprehensive external outreach plan. Digital Equity Core Planning Team members were involved in the development of the external engagement plan in the form of a brainstorm which was held prior to the development of the external engagement plan and provided feedback on the draft of the plan prior to finalization. This helped maximize the effectiveness of the outreach strategy, particularly in reaching underrepresented communities, and ensure the buy-in of the Core Planning Team as they assisted in implementing these plans.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

61

Identification of Stakeholders

The VCBB made an exhaustive effort to identify all applicable stakeholders and bring them into this plan development process. The VCBB started by identifying stakeholders to participate in the Digital Equity Core Planning Team. Once the Digital Equity Core Planning Team was established and the VCBB's broadband consultant was selected, the collective group brainstormed an extensive list of relevant organizations to target for outreach. Vermont also worked to identify particularly relevant underrepresented communities that should be targeted for outreach beyond those suggested in the BEAD and DEA NOFOs. Vermont reached out extensively to groups working directly with the following populations:[50]

- Low-income households
- Aging individuals (60 and above)
- Incarcerated individuals (formerly and currently)
- Veterans
- Individuals with disabilities
- Individuals who have a language barrier, including individuals who are English learners and those who have low levels of literacy
- Individuals who are members of a racial or ethnic minority group
- Religious minorities
- Individuals who primarily reside in a rural area
- Members of state-recognized Abenaki tribes
- Individuals who are LGBTQIA+
- Organized labor
- Unhoused individuals
- Migrant farmworkers
- Children and youth

Outreach to these groups included offers for individual meetings to discuss the experience of the organization and the populations they serve related to the digital divide, as well as requests that these organizations distribute the survey that Vermont developed and distributed, which is discussed in detail below. These groups were also encouraged to respond to the Request for Input issued by the State of Vermont to inform this Plan, which is also discussed in detail below.

Public Awareness

Vermont leveraged traditional and social media to ensure that there was widespread awareness of the development of Internet for All plans, as well as opportunities for the public to provide feedback. The Internet for All planning process received media coverage from television, radio, print, and online news outlets. Several members of the public, including those who attended virtual and in-person listening sessions, noted that they were made aware of the feedback opportunities through media coverage.

Vermont also leveraged a network that is unique to Vermont: Front Porch Forum. Front Porch Forum is a network of individual community message-boards which residents can join for updates from businesses, elected officials, and fellow community members. The VCBB ensured that public engagement events (described in detail below) were shared on Front Porch Forum in the relevant community to the event. This was accomplished by contacting individuals within the VCBB's network who were members of relevant communities to post information. Vermont also purchased a statewide advertisement, which appeared on Front Porch Forum pages across the state, publicizing the public feedback process and

providing a link individuals could visit to learn about in-person listening sessions and ongoing opportunities to provide feedback.

Survey

The VCBB developed and released a survey to collect feedback from Vermonters, particularly those who were unable or unwilling to attend public events. The survey was developed in close concert with the Digital Equity Core Planning Team and included 18 questions on Vermonters' experience with the digital divide along with eight demographic questions to understand which Vermonters were providing feedback. A copy of the survey is available as Appendix II: Public Survey Questions.

Questions for the survey were developed and reviewed by the entire project team to ensure that the feedback collected through the survey would be useful in developing the plan and that the survey provided a comprehensive overview of respondent Vermonters' experience with Internet connectivity. The survey was reviewed for accessibility by Converge Accessibility (a disability and accessibility strategy firm) and for plain language and readability by Green Mountain Self Advocates, a Vermont-based group that advocates for individuals with intellectual and developmental disabilities and has members of that community on staff. It was also made and distributed on an accessible platform (Microsoft Forms). A Spanish language version of the survey was also developed, as this was of particular importance to the migrant farmworker community.

The survey was distributed extensively through a variety of channels. Digital Equity Core Team members distributed the survey widely throughout their own networks and posted on social media channels. The VCBB made exhaustive efforts to distribute the survey; it was included in all press releases that were issued after its publication and was posted on all the VCBB social media channels. The VCBB sent the survey to members of the Vermont Senate and General Assembly, Vermont's Regional Planning Commissions, Communications Union Districts, school superintendents, town clerks, and submitted it to various organizations for inclusion in newsletters. The VCBB also worked with the Vermont Department of Corrections to have the survey distributed to currently incarcerated Vermonters during educational programming. It was always sent with a request to recipients to distribute it to their networks. Members of the project team also distributed the survey to various organizations throughout the State as identified through the stakeholder identification process described above. Members of the project team, including Digital Equity Core Planning Team members, consulting staff, and Vermont staff members also shared the survey on their personal social media channels. In total, Vermont received over 1,997 survey responses (as of July 10, 2023).

Vermont also made available a telephone number, mailing address, and email address so that members of the public could provide feedback in a less structured manner, if that would be more comfortable for them. Vermont received over 130 messages from Vermonters through these ongoing feedback collection channels, which were coupled with qualitative survey results for the purposes of analysis and integration into these plans.

Events

In addition to the survey, Vermont offered real-time opportunities for the public to provide feedback and ask questions about the BEAD and Digital Equity planning process. Vermont hosted two virtual listening sessions via Zoom, and six in-person listening sessions in communities across Vermont.[51] Based on current broadband availability and adoption

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

63

data for the State of Vermont, event locations were chosen proximate to areas with the lowest rates of broadband availability and adoption, while also balancing with the need to have geographic breadth across the state. Event locations were also chosen to ensure easy access to major roads and highways wherever possible, to increase the likelihood of participation for those not from the immediately surrounding region. The events were held most frequently in the evenings, to avoid conflicting with work commitments, with one virtual listening session occurring at noon on a weekday (during popular lunch times), and one in-person event occurring on a weekend. Activities for children were made available for any attendees who could not secure childcare.

Events were planned in close consultation with the Disability and Accessibility Specialist to ensure they would be accessible. In-person events were held exclusively in ADA-accessible locations, with a particular focus on existing gathering places and trusted locations like libraries (where most events were held) and town halls. At virtual events, American Sign Language Interpreters were engaged through the entire event providing real-time interpretation services. Accessibility accommodations were also available for all in-person events by request.

In total, 145 Vermonters attended these real-time listening sessions. Attendees included several small business owners and representatives of relevant stakeholder organizations. The presentation delivered by the VCBB at the start of these events is attached as Appendix III: Listening Session Introductory Presentation .

The VCBB also identified events where Vermonters, and particularly Vermonters who were members of underrepresented communities, were already gathering, and, where appropriate, established a presence at these events. Events attended included the Vermont Veterans Summit, a VTRID Barbecue (for members of the deaf, hard of hearing, late deafened, DeafBlind, and DeafDisabled community), a World Refugee Day celebration, and an ACP enrollment and outreach event hosted by the Department of Housing and Urban Development and the Barre Housing Authority. At these events, members of the project team distributed the public feedback survey, assisted individuals in completing the survey, and answered questions about the

64

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

Internet for All planning process.

Coordination with Ongoing Efforts

There are several information gathering and public efforts currently ongoing in Vermont. To minimize duplication and confusion and to avoid overburdening the public with requests for feedback on similar topics, the VCBB felt it was important to combine outreach efforts to the extent possible throughout this process.

- Vermont Veterans Outreach: Vermont Veterans Outreach is attending a variety of outreach events throughout the summer that are specifically tailored to the veterans community. On Saturday June 24, for example, Vermont Veterans Outreach attended an outreach event hosted by the Department of Veterans Affairs. Vermont Veterans Outreach is distributing the survey and assisting with completion at these events.

- Housing and Urban Development: The Department of Housing and Urban Development is hosting ACP enrollment events throughout the state. As described above, members of the project team attended the first of three outreach events, hosted in Barre, and used it as an opportunity to collect survey feedback. Survey distribution will continue at future events.

- Northeast Kingdom Community Action: NEKCA recently received an ACP Outreach Grant from the FCC. The project team coordinated with NEKCA staff to ensure that they would distribute the Internet for All survey during their outreach efforts (when appropriate) and to coordinate events.

- Equal Access to Broadband: Equal Access to Broadband is a non-profit organization which specifically works with low-income

Vermonters to access the ACP and low-cost service plans. Equal Access to Broadband is a member of the Digital Equity Core Planning Team. The Project team has had several one-on-one conversations with Equal Access to Broadband leadership to better understand the work they're currently performing, gathering their thoughts on the barriers experienced by low-income Vermonters in accessing and using the Internet.

- Vermont's Ten-Year Telecommunications Plan: The DPS is beginning an update to its Ten-Year Telecom Plan. The VCBB coordinated directly with the DPS to coordinate the timing of outreach and to identify opportunities to share data and information.

- ACP Outreach Coordination: Given the similar work being performed by three of these groups (in addition to a planned focus on increasing ACP uptake in Vermont's forthcoming Digital Equity Plan), the VCBB convened a meeting of all groups working on ACP outreach in the State. This allowed the groups to synergize strategies, identify gaps in outreach to and support for ACP-eligible households, and coordinate future efforts.

Request for Input

At the end of May, the VCBB released a Request for Input (RFI) on the BEAD Program. The purpose was to solicit feedback and suggestions to inform grant funding, eligibility, and compliance for funds distributed by the State as part of the BEAD Program. Vermonters have put a lot of thought and effort into increasing broadband access, and the VCBB felt it was crucial to give them several opportunities to voice their ideas on how to best continue that work. The RFI was distributed via the VCBB's website, LinkedIn, and distributed via email to stakeholders including those at ISPs and CUDs. Vermont received 44 responses to its Request

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

65

for Input. A description of the commenters is attached as Appendix IV.

Individual Engagement with Stakeholder Organizations

In addition to the RFI, Vermont augmented this extensive public feedback with direct outreach to a multitude of stakeholder organizations. Outside of the Digital Equity Core Planning Team, the VCBB undertook multiple levels of direct engagement with ISPs, non-profits and community-based organizations, and other government officials and agencies.

For organizations that will be most directly impacted by the BEAD program, particularly ISPs and CUDs, the VCBB provided multiple avenues for engagement. The project team met with ISPs and CUDs individually, in addition to meetings and conversations with the Vermont CUD Association, a coalition of all 10 CUDs. These groups were also given an opportunity to schedule time to ask questions during weekly "office hours," where representatives of both the VCBB and the broadband consulting team were in attendance. Gathering feedback from these groups, which represent the likely subgrantees of Vermont's BEAD funds, is especially crucial in developing a subgrantee selection process that is practical and workable while adhering to Vermont's vision and goals.

The VCBB also engaged the Digital Equity Core Planning Team members, statewide non-profits and government agencies, and local community organizations that work closely with underrepresented communities to discuss their and their community's experience with the digital divide. These groups also contributed suggestions for how to make this plan as successful as possible for everyone in Vermont. Examples of such organizations include Working Fields, a workforce development organization for the formerly incarcerated, Migrant Justice, an organization that supports

migrant farmworkers and their families, and Vermont Council on Rural Development, an economic development organization that has worked specifically on digital equity issues in the past. These organizations provided feedback that was used to inform the plans and were also particularly important in expanding the reach of the VCBB's survey into underrepresented communities.

If organizations were not receptive to scheduling or too busy with other priorities to schedule an individual meeting, the VCBB continued to reach out via email to those groups to pass along information on public feedback opportunities. Those organizations could then forward the information along to their various email lists.

Public Comment Period

A draft of this Plan also was released for 14 days of public comment. Vermont worked proactively with those who submitted feedback to address any concerns and further refined the Plan prior to its finalization and submission.

The VCBB undertook a public awareness campaign to ensure interested parties were aware of the public comment period. This included outreach to television, print, online, and radio outlets, outreach to stakeholder organizations who have already participated in the external engagement process during the plan development phase, and a public briefing where Vermont officials provided a summary of the draft plan and an overview of how to submit comments.

In summary, this extensive external engagement process, which included outreach to government agencies, ISPs, CUDs, nonprofits, community organizations, elected officials, and the Vermont public, resulted in:

- Bi-weekly meetings of the Digital Equity

Core Planning Team

- Six regional in-person events

- Two statewide virtual events

- 22 virtual "roundtables"— convening group conversations, as well as individual meetings with relevant stakeholder groups as identified by the VCBB

- 13 one-on-one interviews with members of the Digital Equity Core Planning Team, CUDs, and several ISPs

- Five community-based events specifically targeting Covered Populations

- 44 responses to the request for public input on the BEAD Five-Year Action Plan and Initial Proposal

- 1,997 responses to the community survey

- 115 emails and phone calls received containing feedback from Vermonters

- One public comment period on the draft BEAD Five-Year Action Plan (a further comment period will be provided for the BEAD Initial Proposal)

Results

Vermonters provided extensive feedback on a variety of aspects of the digital divide.

Accountability

Vermont has a history of unfulfilled broadband network deployment commitments. As a result, Vermonters consistently cite accountability as a top priority for the BEAD program. Dozens of written comments (collected through qualitative survey response and through email) referenced this history and mistrust of large privately-owned ISPs. This issue was also mentioned at four of the listening sessions where comments were met with widespread agreement. Several attendees at multiple in-person events voiced a preference for

municipally owned and operated broadband providers considering this accountability concern, a sentiment that was echoed in 45 written public comments.[52]

Another area stakeholders focused on was accountability of providers to existing customers. 27 percent of those surveyed reported poor customer service by ISPs (albeit without distinguishing between those publicly- or privately-owned).[53] This was supplemented by significant qualitative feedback related to ISP service. An attendee at the Newport listening session (who is a disabled, 74-year-old female Veteran currently pursuing her master's degree at the University of Vermont) reported that she spent the past 18 months being told by her provider that issues with her Internet connectivity were related to the computing device she was using. She purchased a new computer, at significant personal cost, had the same connectivity issues, and was again told by the provider that the problem was her computing device. She again spent significant time working with the device manufacturer, who eventually determined that the bandwidth of her home connection was at issue. Multiple other attendees at listening sessions across the state reported being unable to reach customer service lines for their provider and unsatisfactory resolution to issues. This is coupled with reported consistent rate increases despite no improvements in service and existing service which infrequently reaches advertised speeds, which are already well below the BEAD program's 100/20 benchmark for high-speed broadband service.

It is important to note that attendance at stakeholder events, formal comments, and responses to surveys was voluntary. In addition, given the goals of the BEAD Program, stakeholder events were intentionally held in parts of the State with lower rates of broadband availability and adoption. It is possible that

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

67

those who attended these events or responded to the RFI or survey are not representative of all Vermonters. Nonetheless, they do represent a vocal and largely dissatisfied group.

Robust accountability measures in the administration of BEAD subgrants, therefore, will be of immense importance in securing the buy-in of the Vermont public and to avoid the pervasive and negative experience that has proven widespread in the State. Many Vermonters' preference for municipally-owned broadband networks, and CUDs in particular, reflects their desire to have more direct and timely access to their providers and a mechanism for ensuring accountability.

Affordability

Affordability was consistently raised as the number one barrier for many Vermonters in accessing the Internet. 50% of Vermonters surveyed described the cost of Internet service as too high, and 28% of respondents who do not have a home Internet connection indicated that high costs were at least one of the reasons why. It will be crucial that Vermont ensures that low-cost, high-speed plans are available to all low-income and middle-class households using a BEAD-funded network.[54]

Vermont stakeholder organizations that work with low-income communities consistently raised the point that while the ACP is helpful, a $30 per month discount is not enough of a subsidy to make Internet affordable for many Vermont families, due to the high overall cost of service. While maintaining funding for the ACP is crucial, these organizations believe that Vermont should consider a supplemental program to further subsidize the cost of service for families. This feedback was echoed by event attendees at multiple listening sessions. In one case, an attendee (a 35-year-old Black man with disabilities living in a rural area)

described the challenges he has affording his $80/month Internet service. The burdensome application process, coupled with customer service issues with his provider in getting the ACP benefit applied, have meant that he continues to pay $80/month for inadequate service. He expressed the importance of not just making the ACP sign up process easier, but of also taking further measures to ensure affordability.

An additional concern among Vermonters is lack of price competition. Many Vermonters express concerns about being served by a single provider of broadband services. Indeed, only 48 percent of Vermonters have access to at least two providers of 100/20 Mbps broadband services.[55] Without any or many competitive options, this means consumers have limited options if and when their service provider raises prices. During public listening sessions, many Vermonters alleged price increases of 50 percent or more every two years, while speeds and service quality have continued to degrade. The Vermont public finds such actions totally unacceptable.

Particularly given the subsidy amounts that BEAD subgrantees will be receiving to build out broadband infrastructure, Vermonters are concerned that ISPs will fall into the same practice of regular rate increases, despite no improvement in service. Accountability measures and/or limits on price increases will be important to ensure that service is not only affordable now but remains affordable into the future.

Availability

Availability of high-speed Internet service has been central to feedback received from Vermonters. Many virtual listening session participants complained about the lack of available high-seed Internet connectivity where

they live. 46% of survey respondents described available Internet connectivity as too slow.

The negative implications of this lack of availability are multi-layered and profound. Particularly for an elderly and rural population, the Internet can be the only place to keep up with one's friends and family. An attendee at one of our virtual listening sessions said:

respondents cited reliability issues as being one of their chief complaints about their Internet experience, and 22 percent of survey respondents indicated that they experience Internet outages, inability to place or take video calls, at least twice a week (with 24 percent indicating they experience those issues at least once a day). Issues of service reliability were also brought up during every listening session held by Vermont related to this project.

> **"I don't have a big community in Vermont, and I'm unable to virtually connect with my friends because affordable Internet service that works is simply not available to me. I get lonely, and this Internet would give me some social life back."** – Virtual Listening Session Participant

Coupled with a lack of cellular coverage, lack of available high-speed home broadband is also a safety issue. At Vermont's Burke listening session, one of the attendees, the Director of Outpatient Services for the region's main mental healthcare facility, described a total inability to connect with patients in crisis during COVID due to the unavailability of service that could support something as basic as a Zoom call at his home. For people in crisis, the inability to connect to services can be a life-or-death hurdle. Another attendee at the Newport listening session, a 74-year-old woman recovering from cancer, who has an extremely slow connection and significant reliability issues, lives alone and was ill during her cancer treatment. She was unable to reach out to any of her friends or her care team for multiple days due to an extended outage of her connection and was forced to wait until a friend who lives internationally contacted law enforcement for a welfare check before she was able to seek help.

Reliability

Service reliability has proven to be a major challenge for Vermonters. 40% of survey

One of the attendees at Vermont's Rutland-based listening session shared that she lives at the end of a dirt road with no reliable connectivity options. She is the caretaker for her husband, who has advancing Alzheimer's Disease, and with no family nearby, is his only support. To regain some independence and ability to leave the house, she purchased livestreaming cameras to place throughout the house to monitor her husband when she's running errands. Her Internet connection at home is so unreliable that the livestream fails almost every time she is out of her house, which has resulted in her being confined to her home again. She is also unable to make tele-health appointments for her husband due to their unreliable Internet connection, greatly increasing the burden of her caregiving.

While the BEAD NOFO requires that all BEAD-funded network deployments satisfy network reliability requirements,[56] it is essential that service reliability is scrutinized in the selection of any non-fiber technologies considered for BEAD funded network deployments. Vermont is a location with both a challenging

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

69

topography and an extreme climate. The ability of technology to navigate dense trees and mountainous topography in all four seasons is critical. Reliability of technology in extreme cold, snow, and heavy rainfall will also be essential.

Technology

Most Vermonters who provided input declared a strong preference for fiber-optic broadband. At all but one of the events hosted by the VCBB related to this project, most residents expressed the belief that fiber is the only technology that can reliably serve Vermonters, particularly given the topography of the State. This feedback also reflects the feedback received from stakeholder organizations.

During one stakeholder meeting, the founder of a non-profit based in Vermont expressed the implications of the lack of fiber availability on Vermont's economy and workforce. He noted that:

> **"Fiber is the future. From a worker retention and attraction perspective, we are finding it challenging to attract the type of talent that we want to our organization without high-speed, affordable, and reliable Internet access being consistently available. We frequently see UVM graduates forced to leave the state not because they want to, but because the types of high-paying, computer-based jobs are uncommon in Vermont. One of the main reasons for that is the lack of high-speed Wi-Fi (and particularly fiber) availability. For Vermont to build a 21st century workforce, it needs 21st century connectivity."**
>
> – Founder of a Stakeholder Organization

Additionally, there is a particular sensitivity among some Vermonters of treating those in rural areas as "second-class," and receiving a worse/less reliable/less future-proof connectivity option. It is the VCBB's expressed goal to connect as many Vermont households to fiber as possible. However, in situations where connecting an address would exceed the VCBB's extremely high cost per location threshold and alternative lower-cost technologies are being proposed, it will be important to reassure Vermonters of the reliability and speed capabilities of alternative technologies being deployed.

Community Anchor Institutions

Vermont is a state of small cities and towns, where many communities do not have many of the CAIs that people living in more developed areas of the country would consider a given. Therefore, it was particularly important to get feedback from the public on locations that serve as central gathering points within the community, including for underrepresented communities and where individuals may go to access services.

- The VCBB asked members of the public and stakeholder organizations what important

community locations were missing from this list. Feedback highlighted how many community hubs are different in each town and region of Vermont, and often they are private businesses. The suggestions provided valuable input for understanding how to get the word out about proposed broadband networks, new services available, and digital equity resources. The VCBB has decided to add houses of worship, correctional facilities and juvenile detention centers, public access television station facilities, and public outdoor spaces to the initial list of CAIs provided by NTIA (see box).

• Houses of Worship: Houses of worship are places where members are from all walks of life, including BEAD's Underrepresented Communities. Additionally, in many communities across Vermont, houses of worship provide services to Vermonters, and particularly to low-income families and Vermonters experiencing housing insecurity, through soup kitchens/meals on wheels programs, charity shops for clothing and household items, and low-cost daycare programs.

• Correctional facilities and juvenile detention centers: In order to close the digital divide for currently incarcerated Vermonters, VCBB must ensure that all of Vermont's correctional facilities have reliable, high-capacity broadband available. This will also allow these facilities to improve offerings for inmate education and workforce training.

• Public outdoor spaces: Public outdoor spaces like community parks and gardens are frequent gathering places for Vermonters, including members of Underrepresented Communities. These are places without admission fees or membership requirements, meaning that these are locations that have low barriers to entry

and attract each of our underrepresented communities. This is reflected in the fact that several of the population-specific events that VCBB attended as a part of the stakeholder engagement process were held in parks across VT. In the warmer months, these are also frequently locations where community members gather for community programs or concerts, which will also attract members of Underrepresented Communities.

• Public access television station facilities: while not providers, these channels serve as critical information-sharing channels, including about social services programs, device affordability programs, and service affordability programs, including the ACP. These stations also play a critical role in sharing information during natural disasters and other crises, making it particularly critical that the facilities housing these stations have the most robust, resilient, and highest-capacity broadband service possible available to them.

Process During Plan Implementation

External engagement will continue throughout the development and implementation of Vermont's BEAD Program. For the next several months, the VCBB will continue to reach out extensively to stakeholder organizations in the context of the development of the Digital Equity Plan and the BEAD Initial and Final Proposals. This outreach will include continued direct outreach to stakeholder organizations, and particularly those organizations that are working in the digital equity space and/or well-positioned to play a role in the implementation of the Digital Equity Plan.

Throughout the implementation of Vermont's BEAD program, the Vermont project team will continue to provide updates to interested stakeholder organizations. This will

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

71

naturally include extensive coordination and engagement with subgrantees to work with them through the subgrantee application and project deployment processes. It will also be particularly important to be aware of additional broadband infrastructure grant funding that is coming into the State through programs like ReConnect, and to have an up-to-date map and understanding of the current state of access in Vermont. This will also include providing continued updates to organizations who have participated in the plan development process. The Digital Equity Core Planning Team will continue to advise the VCBB throughout the implementation of the BEAD and Digital Equity Plans.

The VCBB will also continue to coordinate with organizations doing complementary outreach, including the organizations described above. This will also include identifying additional related initiatives that commence during the plan implementation process. ACP outreach coordination meetings will continue monthly for the foreseeable future, and additional groups will be added if additional ACP outreach programs are initiated in Vermont.

BEAD Priorities and Planned Activities

The first objective under the BEAD program is ensuring all Vermonters have access to high-speed broadband. The following priorities align to the vision, goals, and objectives to address the broadband and digital equity needs and gaps described earlier.

Goal: Mobilize resources for end-to-end fiber broadband infrastructure deployments to all unserved and underserved locations and CAIs in Vermont.

Priorities:

- Ensure that Vermont's BEAD Program successfully extends broadband access providing throughputs of at least 100/100 Mbps to all unserved and underserved locations and at least 1/1 Gbps to all CAIs.

- Attain NTIA approval for Vermont's broadband and digital equity strategies and plans.

- Promote resiliency and redundancy in broadband infrastructure across the State.

- Provide clear guidance and assistance to prospective and selected subgrantees.

- Building accountability into the program to ensure subgrantees deliver on commitments in a cost-effective, timely, and compliant manner and Vermonters are able to benefit from sustainable and affordable high-speed broadband services.

Planned Activities:

1. Define and design a grant program to administer BEAD funds, approved by NTIA.

2. Identify all potential assets the State can include for subgrantee matches (including physical assets).

3. Establish the grant administration platform.

4. Share information about eligible unserved and underserved locations with providers and administer a public challenge process.

5. Develop and issue the request for proposals for BEAD subgrants; solicit proposals from potential subgrantees.

6. Evaluate proposals against a transparent scoring rubric and select projects for funding.

7. Administer grants and oversee grant program.

8. Monitor and conduct quality assurance of

subgrantees.

9. Conduct ongoing stakeholder engagement to ensure subgrantees are successful and accountable, underrepresented communities are heard and supported, and that the public is aware of Vermont's progress toward implementing the BEAD Plan.

10. Support CUDs, ISPs, and other entities to pursue funding opportunities for expanded broadband deployment and other digital equity initiatives.

11. Provide regular updates to the VCBB Board, Legislature, and general public.

Goal: Ensure sustainable, community-driven solutions across the entire State.

Digital Equity-focused programming will be addressed more specifically and in depth in Vermont's forthcoming Digital Equity Plan. An initial overview of priorities and planned activities is below.

Priorities

- Encourage and support public-private partnerships between ISPs and CUDs, municipalities, nonprofits, and other community organizations to ensure community-centered and community-driven broadband and digital equity solutions are available to and adopted by Vermonters statewide.

- Collaborate with other agencies and stakeholders to compile and increase awareness of digital equity resources for Vermonters.

Planned Activities

Develop Vermont's Digital Equity Plan under the Digital Equity Act Program.

1. Partner with other state agencies and Digital Equity Core Planning Team to publish and maintain a centralized digital equity asset inventory.

2. Continue to coordinate with agencies and nonprofits undertaking similar or related work, to avoid duplication and maximize efficiency.

3. Work with all ISPs in the State to ensure programs for broadband affordability are available, promoted, and utilized by Vermonters eligible to benefit from them.

4. Support the CUDs and other local community organizations to ensure residents and CAIs can access high-quality, high-speed broadband and hold providers accountable for the quality and reliability of that service.

Goal: Ensure high-speed broadband services and devices are affordable for all Vermonters

Priorities

- Ensure consumers are provided with services that adhere to values that have been identified by the state, like net neutrality, transparent pricing, no data caps, ongoing customer support, and data privacy.[57]

- Ensure affordable options are available.

- Ensure people are aware of and trust affordable options.

Planned Activities

1. Define Vermont's strategy for broadband affordability and low-cost service options (for the BEAD and Digital Equity programs), building on requirements and guidelines from NTIA and the Vermont Ten-Year Telecommunications Plan.

2. Promote the ACP and any other resources

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

73

for affordable broadband service and devices as well as digital skilling.

3. Engage stakeholders to understand how effective the design of low-cost service options and affordability programs are for meeting the needs of income-insecure Vermonters.

Goal: Enhance workforce development for broadband and the digital economy.

Priorities

- Increase broadband industry awareness and involvement in the opportunity created by programs like BEAD.

- Increase adequate capacity of education and training programs to develop the talent pipeline.

- Promote, target, and recruit participants in Vermont.

- Support for the industry to create sustainable employment opportunities.

Planned Activities

1. Continue to convene a working group of stakeholders related to broadband and workforce development (i.e., Department of Labor, technical colleges).

2. Continue to liaise with ISPs and CUDs to understand workforce needs and challenges as well as collaborate on training and recruitment strategies.

3. Assist with the design and implementation of training and apprenticeship programs.

4. Collaborate with stakeholders and community organizations to promote training and career opportunities.

5. Monitor, evaluate, and learn from progress.

Goal: Improve socio-economic conditions across Vermont.

Priorities

- Continue to develop and implement Vermont's broadband workforce development strategy.

- Ensure all CAIs have access to 1 Gbps symmetrical broadband by the conclusion of the BEAD program.

Planned Activities

1. Oversee BEAD subgrantees to ensure accountability for fair labor standards and encourage recruiting from underrepresented communities and State-supported apprenticeship programs.

2. Conduct ongoing engagement of ISPs to understand workforce development needs, in collaboration with the Department of Labor.

3. Continue to support the design and implementation of apprenticeship and job training programs in collaboration with the Department of Labor and potential employers.

4. Support CAIs and work with them to develop or expand programs and resources to increase the use of digital access for socio-economic mobility.

The following principles will underpin the VCBB's approach to implementing Vermont's BEAD Five-Year Action Plan:

Vermont is fortunate to have already established existing community structures to guide universal service with community accountability through the CUDs. Public-private partnerships will be important for the success of this program. Such partnerships will ensure sustainability and accountability of high-quality broadband services. They will also ensure communities are informed and empowered to benefit from such service. Prospective subgrantees of Vermont's BEAD

Keep an intentional focus on equity	Honor the strategy and efforts already underway in Vermont to tackle inequities in broadband access	Continous stakeholder engagement and collaboration	Ensuring a transparent, fair, and open process
Pursuing a comprehensive plan for broadband affordability	Prudent administration and oversight	Prioritize best value (protect / leverage existing public investments) and avoid duplication of funding	Avoid distortionary investments
Aligning broadband access with broader digital equity efforts	Be data-driven	Listen to communities and make them part of the process	Ensure resilient, future-proof technology and approaches are adopted

program will be strongly encouraged to engage in public-private partnerships.

Vermont is fortunate to have already established existing community structures to guide universal service with community accountability through the CUDs. Public-private partnerships will be important for the success of this program. Such partnerships will ensure sustainability and accountability of high-quality broadband services. They will also ensure communities are informed and empowered to benefit from such service. Prospective subgrantees of Vermont's BEAD program will be strongly encouraged to engage in public-private partnerships.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

75

Execution on Non-Deployment Activities

In addition to the investment in broadband availability to unserved and underserved communities across Vermont, non-deployment activities will also be important to advance broadband adoption and digital equity. Digital equity is an important value across Vermont's public service programming (as demonstrated in the Alignment section). Vermont is in the process of developing its Digital Equity Plan—an in-depth statement of Vermont's vision for digital equity and plan to advance digital equity in Vermont. Since broadband access is a major need for the state, the VCBB expects it will need to use all of its BEAD funding on broadband deployment projects. However, if the VCBB is successful in optimizing available BEAD funds (e.g., by encouraging subgrantees to reduce costs, maximize private sector matches, and obtain additional funding for deployments), the VCBB might be able to free up BEAD funding for non-deployment digital equity programming. Whether or not this can be achieved, the VCBB plans to ensure close alignment between BEAD and Digital Equity initiatives.

Central to Vermont's approach to digital equity is maximizing the positive impacts of access to the Internet and devices, while minimizing the potential negative social impacts. The VCBB holds a sense of responsibility to ensure that all Vermonters are empowered to engage in the digital world safely, securely, and productively. This means that programs focused on digital skills (including programs around minimizing the spread of misinformation), device access and affordability, access to assistive technologies and specialized support for people with disabilities, job training, and tele-health expansion will all be central to Vermont's digital equity strategy. The VCBB has already laid the groundwork for these partnerships (as described in the Stakeholder Engagement section above) and looks forward to expanding on these ideas in its Digital Equity Plan.

Estimated Timeline and Cost for Universal Service

Figure 22 summarizes Vermont's timeline for completing the BEAD program and achieving universal access to reliable and affordable broadband service across Vermont.

The estimated cost of extending fiber to all of Vermont's approximately 50,000 unserved and underserved locations (excluding RDOF funded locations) is $500-$700 million.[58] BEAD, ARPA, subgrantee matches, and other funding sources will cover this cost. This estimate leverages modelling conducted by Cartesian for ACA Connects, which uses statistical modelling of previously funded fiber projects in areas with different building densities to calculate the cost to pass a home with fiber and aligns with other available estimates.[59] For locations with lower building densities than were referenced

FIGURE 22. VERMONT'S ESTIMATED TIMELINE FOR UNIVERSAL SERVICE

August 28, 2023: BEAD Five-Year Action Plan submitted to NTIA

- Vision, goals, objectives
- Strategy

Fall 2023: BEAD Initial Proposal submitted to NTIA.

- Eligible locations
- Challenge process
- Extremely High Cost Per Location Threshold
- Subgrantee and project eligibility requirements
- Scoring criteria

Dec. 2023 – March 2024 (Pending approval from NTIA):

- Process approved modifications and de-duplication of funding
- Conduct challenge process

March – August 2024: Conduct subgrantee selection process and submit Final Proposal to NTIA.

September 2024: NTIA approval of Final Proposal and award subgrants

2024 – 2028: Ongoing monitoring, reporting, and performance management

Timing is dependent on approvals from NTIA

Dec. 31, 2028: Affordable high-speed broadband available to all Vermonters

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

77

in the Cartesian model,[60] this estimate utilizes another model, which leverages data on end-to-end fiber project costs in lower population density locations.[61] The combination of these two models is also consistent with other models which build their estimates based on road miles.[62] Both types of models calculate the cost to extend end-to-end fiber connectivity to each unserved or underserved location, which were summed to arrive at the total cost of extending fiber to all of Vermont's unserved and underserved locations. The upper end of this range accounts for the risk of project cost overruns (i.e., to account for inflation, supply chain challenges, labor shortages, etc.). Further and more extensive analysis will be required to develop a more precise cost estimate.[63] The VCBB will be further refining this analysis for inclusion in its BEAD Initial Proposal Volume 2 submission.

Several other factors give the VCBB confidence that it will have sufficient funds to extend end-to-end fiber to all unserved and underserved locations, as well as all eligible CAIs. Prior to BEAD program implementation and subgrantee selection, the VCBB expects that the number of unserved and underserved locations in the State will decline somewhat from approximately 50,000. In particular:

1. There are unserved and underserved locations where ISPs plan to extend 100/20 Mbps or better service without any public funding support. The VCBB is working with ISPs to identify those locations.

2. The FCC is considering a proposal to require participants in the Alternative Connect America Model (ACAM) and Connect America Fund Broadband Loop Support (CAF BLS) programs to extend 100/20 Mbps or better networks to align with BEAD program obligations.[64] Many of these locations will be unserved or

underserved locations. Several Vermont ISPs participate in the ACAM and CAF BLS programs.[65]

3. The VCBB intends to continue its support of efforts by CUDs to submit and gain approval for applications for grants to extend their end-to-end fiber networks to more unserved and underserved locations (such as United States Department of Agriculture (USDA) Rural Utility Service (RUS) ReConnect Program applications).

Taken together, these factors could reduce by several thousand the number of unserved and underserved locations in Vermont. A reduction in unserved and underserved locations will translate to lower program costs.

Another important mechanism for extending available funds is the BEAD Program's requirement to establish an "Extremely High Cost Per Location Threshold." The cost to extend end-to-end fiber connectivity to each unserved and underserved location varies significantly across the State. While many unserved and underserved locations could cost less than $2,000 to upgrade to fiber, there also are a small percentage of unserved and underserved locations in the State that could cost over $20,000 per location to reach with end-to-end fiber infrastructure. The highest cost locations in the State tend to be located in very remote, low-population density areas and many of these are off-grid locations.

As discussed above, the VCBB's goal is to extend 100/100 Mbps or faster connectivity to all on-grid locations in the State and extend 100/20 Mbps or faster connectivity to all off-grid locations in the State. The VCBB anticipates that the cost to extend end-to-end fiber connectivity to most off-grid locations will exceed its Extremely High Cost Per Location Threshold and, therefore, these locations might

Planned Utilization of Federal, State, and Local Funding

be reached with lower-cost alternative Reliable Broadband Service technologies. In its BEAD Initial Proposal Volume 2, the VCBB will specify Vermont's proposed Extremely High Cost Per Location Threshold.

Vermont shares NTIA's strong preference for deploying end-to-end fiber connectivity to all unserved and underserved locations, as well as all eligible CAIs. Aligned with the VCBB's statutory mandate, this approach prioritizes quality, scalability, and reliability. With NTIA's allocation to Vermont for BEAD announced at $228M and accounting for matching and other available federal funds that can be utilized for network deployments, the VCBB believes that most available funds will be focused on addressing the first three priorities of the BEAD program: extending high-speed broadband to all eligible unserved locations, all eligible underserved locations, and all eligible CAIs.

To the extent that there are funds remaining after accounting for the cost of extending high-speed broadband to all unserved and underserved locations, as well as all eligible CAIs, the VCBB will allocate funding to permitted non-deployment purposes. The VCBB intends to include specific proposals for how it will spend remaining funds on non-deployment purposes, such as digital equity programs, in its BEAD Initial Proposal.

There are several federal, state, and local funding sources identified the III.B. Existing Funding section, which may only be used for specific purposes, such as broadband affordability programs or connectivity at parks and libraries. Vermont intends to fully utilize these funding sources in furtherance of its digital equity goals.

Alignment

In developing this BEAD Five-Year Action Plan, the VCBB reviewed and aligned State legislation, policies, and strategies with the IIJA and NTIA requirements. The VCBB also has (and will continue to) collaborated with other agencies with related plans and strategies.

Areas of alignment include:

- Setting a minimum broadband speed goal of 100/100 Mbps, in alignment with Vermont Legislature Act 71 of 2021. This is a higher standard than the minimum defined by NTIA in the BEAD Program NOFO.

- Analyzing planned deployments funded by other federal and state programs (e.g.,

ARPA, ReConnect) to avoid duplication and maximize the use of available resources.

- Leveraging this historic funding for broadband infrastructure to create high-quality career opportunities for Vermonters, coupled with training initiatives to prepare them to succeed in these new job opportunities. Broadband infrastructure also unlocks opportunities for remote work.

- The importance of expanding access to unserved and underserved communities and addressing challenges of affordability are highlighted in the Vermont Ten-Year Telecommunications Plan. Networks should be resilient, redundant, robust,

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

79

and flexible for future innovations in technology. Networks should also be capable of supporting Lifeline and public safety services. The plan also recommends that funds should be established to support digital skilling and equity initiatives.[66]

- How information and services are available – the language as well as the venue.[67] For example, broadband and digital equity can enable services such as telehealth for Vermonters for whom access to a health facility is challenging (e.g., distance, cost of transport)

- Promoting energy efficiency, renewable energy usage, and climate risk and mitigation strategies in broadband deployment.[68] The Vermont Comprehensive Energy Plan "also recognizes the role that broadband services play in delivering transformative technologies to all Vermonters, together with the capability of managing those technologies to reduce costs."[69] Expanded broadband access can enhance technologies such as smart meters to improve energy efficiency.

Related local plans for alignment with BEAD include:

- Vermont Act 71 (2021)
- Vermont Ten-Year Telecommunications Plan
- Communications Union Districts Business Plans
- ACP Outreach Initiatives
- Health Equity Plan and Working Group
- Workforce Development Plan and Working Group
- Vermont Comprehensive Energy Plan
- Vermont Climate Action Plan
- Environmental Justice Equity Plan
- Language Access Plan

Technical Assistance

The VCBB will need additional technical assistance with the following activities as it prepares to implement its BEAD program:

- Identifying and classifying eligible location classifications.

- Compiling, tracking, and de-duplication of funding broadband deployments.

- Obtaining and analyzing information from ISPs about existing plans for broadband construction.

- Refining cost estimates and determining the Extremely High Cost Per Location Threshold.

- Establishing the challenge process and grant administration platform.

- Defining effective subgrantee scoring criteria and selection process.

- Supporting prospective subgrantees in accessing BEAD funds.

- Evaluating subgrantee proposals' technical and cost proposal as well as capacity to successfully complete the proposed project.

- Outreach and communication about deployment plans and digital equity initiatives.

Conclusion

Vermont has focused on the issue of equitable broadband access for many years and has established the frameworks and structure to position it well to execute this BEAD Program. With the historic resources provided under the IIJA, Vermont is ready to seize this opportunity to establish a comprehensive, resilient high-speed broadband network and help Vermonters reap the benefits connectivity can unlock.

> "Vermont is in a unique position to lead the nation in delivering on the promise of universal service, accountability, and affordability for all of its citizens"

Definitions

The following definitions are pulled from the NTIA BEAD NOFO[70] and from Vermont Act 71 (2021).[71]

Broadband; Broadband Service—The term "broadband" or "broadband service" has the meaning given the term "broadband Internet access service" in Section 8.1(b) of title 47, Code of Federal Regulations, or any successor regulation, meaning it is a mass-market retail service by wire or radio that provides the capability to transmit data to and receive data from all or substantially all Internet endpoints, including any capabilities that are incidental to and enable the operation of the communications service, but excluding dial-up Internet access service. This term also encompasses any service that the Commission finds to be providing a functional equivalent of the service described in the previous sentence.

Broadband DATA Maps—The term "Broadband DATA Maps" means the maps created by the Federal Communications Commission under Section 802(c)(1) of the Communications Act of 1934 (47 U.S.C. § 642(c)(1)).

Community Anchor Institution—The term "community anchor institution" means an entity such as a school, library, health clinic, health center, hospital or other medical provider, public safety entity, institution of higher education, public housing organization, or community support organization that facilitates greater use of broadband service by vulnerable populations, including low-income individuals, unemployed individuals, and aged individuals. In the context of Vermont, the term community anchor institution is further defined in the sections below.

Digital Equity—The term "digital equity" means the condition in which individuals and communities have the information technology capacity that is needed for full participation in the society and economy of the United States.

Eligible Community Anchor Institution—The term "eligible community anchor institution" means a community anchor institution that lacks access to Gigabit-level broadband service.

Eligible Entity—The term "Eligible Entity" means any State of the United States, the District of Columbia, Puerto Rico, American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands or, in the case of an application failure, a political subdivision or consortium of political subdivisions that is serving as a Substitute Entity.

Extremely High Cost Per Location Threshold— An "Extremely High Cost Per Location Threshold" is a BEAD subsidy cost per location to be utilized during the subgrantee selection process described in Section IV.B.7 of this NOFO above which an Eligible Entity may decline to select a proposal if use of an alternative technology meeting the BEAD Program's technical requirements would be less expensive.

Funded Network—The term "Funded Network" means any broadband network deployed and/or upgraded with BEAD Program funds.

82

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

High-Cost Area—The term "high-cost area" means an unserved area in which the cost of building out broadband service is higher, as compared with the average cost of building out broadband service in unserved areas in the United States (as determined by the Assistant Secretary, in consultation with the Commission), incorporating factors that include— (I) the remote location of the area; (II) the lack of population density of the area; (III) the unique topography of the area; (IV) a high rate of poverty in the area; or (V) any other factor identified by the Assistant Secretary, in consultation with the Commission, that contributes to the higher cost of deploying broadband service in the area. For purposes of defining "high-cost area," the term "unserved area" means an area in which not less than 80 percent of broadband-serviceable locations are unserved locations.

Location; Broadband-Serviceable Location — The terms "location" and "broadband serviceable location" mean "a business or residential location in the United States at which fixed broadband Internet access service is, or can be, installed."

Non-Traditional Broadband Provider—The term "non-traditional broadband provider" means an electric cooperative, nonprofit organization, public-private partnership, public or private utility, public utility district, Tribal entity, or local government (including any unit, subdivision, authority, or consortium of local governments) that provides or will provide broadband services.

Program—The term "Program" means the Broadband Equity, Access, and Deployment Program.

Reliable Broadband Service—The term "Reliable Broadband Service" means broadband service that the Broadband DATA Maps show is accessible to a location via: (i) fiber-optic technology; (ii) Cable Modem/ Hybrid fiber-coaxial technology; (iii) digital subscriber line technology; or (iv) terrestrial fixed wireless technology utilizing entirely licensed spectrum or using a hybrid of licensed and unlicensed spectrum.

State—The term "State" means, for the purposes of the BEAD Program, any State of the United States, the District of Columbia, and Puerto Rico.

Subgrantee/Subrecipient—The term "subgrantee" or "subrecipient" means an entity that receives grant funds from an Eligible Entity to carry out eligible activities.

Underrepresented Communities—The term "underrepresented communities" refers to groups that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life, including: low-income households, aging individuals, incarcerated individuals, veterans, persons of color, Indigenous and Native American persons, members of ethnic and religious minorities, women, LGBTQI+ persons, persons with disabilities, persons with limited English proficiency, persons who live in rural areas, and persons otherwise adversely affected by persistent poverty or inequality.

Underserved Location—The term "underserved location" means a broadband-serviceable location that is (a) not an unserved location, and (b) that the Broadband DATA Maps show as lacking access to Reliable Broadband Service offered with—(i) a speed of not less than 100 Mbps for downloads; and (ii) a speed of not less than 20 Mbps for uploads; and (iii) latency less than or equal to 100 milliseconds.

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

83

Underserved Service Project—The term "Underserved Service Project" means a project in which not less than 80 percent of broadband-serviceable locations served by the project are unserved locations or underserved locations. An "Underserved Service Project" may be as small as a single underserved broadband-serviceable location.

Unserved Location—The term "unserved location" means a broadband-serviceable location that the Broadband DATA Maps show as (a) having no access to broadband service, or (b) lacking access to Reliable Broadband Service offered with—(i) a speed of not less than 25 Mbps for downloads; and (ii) a speed of not less than 3 Mbps for uploads; and (iii) latency less than or equal to 100 milliseconds.

Unserved Service Project—The term "Unserved Service Project" means a project in which not less than 80 percent of broadband-serviceable locations served by the project are unserved locations. An "Unserved Service Project" may be as small as a single unserved broadband-serviceable location.

Universal Service Plan—The term "universal service plan" means a plan for providing each unserved and underserved location in a communications union district or in a municipality that was not part of a communications union district prior to June 1, 2021 access to broadband service capable of speeds of at least 100 Mbps download and 100 Mbps upload.[72]

Appendices

Appendix I: <u>Summary of Responses to Public Survey</u>

Appendix II: Public Survey Questions

The following questions were included in the public survey issued by the VCBB to gather input for the BEAD and Digital Equity Plans.

1. **Do you have a home Internet connection?**

   o Yes

       o How often do you have negative experiences with the speed of your home Internet connection (such as disruptions on video calls, buffering when streaming video, waiting for a webpage to load, inability to send emails)

       o Never

       o Rarely (1-2x/month)

       o Sometimes (1x- week)

       o Frequently (2x/week or more)

       o At least daily

   o No

       o If you do not have a home Internet connection, please select all applicable reasons why:

       o Home Internet service is not available where I live

       o Internet service in my area is slow and not worth paying for

       o The cost of Internet service is too high

       o The cost of a computer or tablet is too high

       o I don't know how to use computers or the Internet

       o I do not see the value of home Internet service

       o I do not know how to sign up for Internet/know if it is available at my home

       o I do not trust my information is safe online/fear online surveillance

2. **Are you satisfied with your home Internet connection?**

   o Yes

   o No

   o Not applicable: I do not have internet service at home

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

85

3. **Please select any statements that you agree with regarding your experience with Internet use.**

o The cost of internet service is too high

o The cost of a computer or tablet is too high

o The internet service is too slow

o The internet service is unreliable

o Customer service from my provider is poor

o I am not confident enough in my skills using computers and the Internet

o Not applicable: I am satisfied with my home internet service

o Not applicable: I do not have Internet service at home

o Other (write here)

4. **How much can you pay for monthly Internet service?**

o Less than $20

o $20-30

o $30-50

o $50-70

o $70+

5. **Would you be interested in any of the following services to gain confidence with digital skills? (check all that apply)**

o Classes in your town

o Online classes

o A tech support number to call to help you use computers or the internet

o Other (write here):

6. **If you selected any services in the previous question, how much would you be able to pay for them? If you did not select any services, you can skip this question.**

o I would not be able to pay for these services

o $5-10

o $10-120

o $20-50

o $50+

86

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

7. How well can you do these internet tasks?

(1=I don't know how to do this at all, 2=I'm a beginner, 3=I'm average, 4=I'm very good, 5=I'm an expert)

(1=I don't know how to do this at all, 2=I'm a beginner, 3=I'm average, 4=I'm very good, 5=I'm an expert)

Task	Circle One				
Zoom, Email, Skype, Facebook	1	2	3	4	5
Finding websites or information	1	2	3	4	5
Knowing information is from a trustworthy source	1	2	3	4	5
Buying or selling things online	1	2	3	4	5
Recognizing a scam	1	2	3	4	5
Keeping your accounts and passwords safe	1	2	3	4	5

8. This question is for people who have a disability. Your input helps us understand how the disability you have affects how you use the internet. People who do not have disabilities can skip this question.

Choose all below that match your experience. You can choose as many answers as you want.

o I don't know about tools that can help me (like a device that reads text out loud, or a way to type without using hands)

o Tools that can help me are too expensive

o I have the devices I need to help me use the Internet, but it doesn't work well

o My disability doesn't affect how I use the Internet

9. Are there any other factors that prevent you from using the Internet at home?

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

87

10. Have you heard of the Affordable Connectivity Program?

o Yes

o No (if no, skip to question 12)

11. Have you enrolled in the Affordable Connectivity Program?

o Yes

o No

Why noy?

> o I believe my income is too high to be eligible
>
> o I don't know how to sign up
>
> o The application process is too difficult

12. The ACP is a benefit program that helps ensure that households can afford the Internet they need for work, school, healthcare and more. ACP provides a discount of up to $30 per month toward internet service for eligible households. Eligible households can also receive a one-time discount of up to $100 to purchase a laptop, desktop computer, or tablet. Eligible households include:

Participants in one of these assistance programs:

- Free and Reduced-Price School Lunch Program or School Breakfast Program
- SNAP (3SquaresVT)
- Medicaid
- Federal Housing Assistance
- Supplemental Security Income
- WIC
- Veterans Pension or Survivor Benefits
- Lifeline
- Recipients of a Federal Pell Grant
- Households with qualifying incomes

Please include your email below if you would like more information about the ACP.

13. Do you see any downsides to expanding access and use of the internet in Vermont?

o No

o Yes

o If yes, what are they?

14. One of the requirements of this federal funding is for the State to identify "Community Anchor Institutions--" or places in Vermont communities where it is especially important to have high-speed, reliable Internet access. Our list includes:

· K-12 schools

· Higher education institutions (such as University of Vermont, Community College of Vermont)

· Workforce Development organizations (such as VT Department of Labor locations, Working Fields, Pathways VT)

· Adult education agencies (such as VT Adult Education, Central Vermont Adult Basic Education, etc.)

· Libraries

· Health clinics, health centers, hospitals, other medical providers

· Public safety entities (such as police departments, fire departments, EMS headquarters)

· Public housing (such as Housing and Urban Development-assisted housing)

· Neighborhood organizations and Community Centers

· Houses of Worship (such as churches, synagogues, mosques, temples, etc.)

· Local and/or state government buildings (such as town halls, town clerks offices, courthouses)

· Housing shelters (such as COTS)

· Social Service Agencies (such as Age Well)

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

89

What do you feel is missing from this list of important community locations, if anything?

15. Please share any other thoughts you have related to accessing and to accessing and using the Internet in Vermont. What would you like to see in Vermont's Internet for All plans?

Demographics Questions:

16. What is your age?

o Under 18

o 18-25

o 26-45

o 26-45

o 46-60

o 61-74

o 75-84

o 85+

17. **What is your race (check all that apply)**

   o American Indian or Alaska Native

   o Asian

   o Black or African American

   o Hispanic/Latino

   o Native Hawaiian or other Pacific Islander

   o White

   o Two or more races

   o Prefer not to answer

18. **What is the primary language spoken in your home?**

   ┌───┐
   │   │
   │   │
   └───┘

19. **Do you identify as a member of any of the following groups? (check all that apply)**

   o LGBTQIA+

   o Immigrant/refugee

   o Unhoused/experiencing housing insecurity

   o A person with a disability or chronic condition

   o A person who is Deaf, Hard of Hearing, late deafened, DeafBlind, or DeafDisabled

   o Recipient of income-based government assistance (SNAP/3SquaresVT, Rental Assistance, Emergency Heat System)

   o Member of a state recognized Abenaki tribe

   o Resident of a rural area

20. **Are you a veteran of the Armed Forces or an active-duty service member?**

   o Yes

   o No

If yes, are you a disabled veteran?

   o Yes

   o No

   o I don't know

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

91

21. What is the last grade you completed in school?

o 8th or below

o 9th

o 10th

o 11th

o 12th/high school graduate

o College or above

22. Does your household include people under the age of 18?

o Yes

o No

23. If you're interested, write your email below to be entered to win a $100 gift certificate.

<u>Vermont Internet for All Planning</u>

Vermont Community Broadband Board

VERMONT

<u>What is the VCBB?</u>

- *The VCBB was created to coordinate, facilitate, support, and accelerate the development and implementation of universal community broadband solutions.*

- *It is the purpose of the VCBB and Vermont Community Broadband Fund to support policies and programs designed to accelerate community efforts that advance the State's goal of achieving universal access to reliable, high-quality, affordable, and fixed broadband.*

VERMONT
VERMONT COMMUNITY BROADBAND BOARD

What is Digital Equity?

- Digital equity means ensuring that all people and communities can afford Internet service and a computer, and have the skills, technology, and capacity needed to fully participate online.

Why are we here?

- The **Broadband Equity, Access, and Deployment Program** provides $42.45 Billion nationwide to expand high-speed Internet access.
1. Expand access to all unserved locations, underserved locations, and community anchor institutions
2. Support digital equity initiatives

- The **Digital Equity Act** provides $2.75 billion to establish three grant programs that promote digital equity and inclusion nationwide.

94

Vermont Community Broadband Board
The State of Vermont's Draft Broadband Equity, Access, and Deployment Five-Year Action Plan

Why are we here?

•In order to get Vermont's allocation of this federal funding (which will be at least $125 million), Vermont needs to produce plans for how we will use the money.

•VCBB believes it is essential that these plans reflect the lived experience of Vermonters. This is also a requirement to receive federal funding.

•We are holding virtual and in-person events across the State to hear directly from you.

VERMONT

BROADBAND BOARD

Discussion Questions

- Why don't you have Internet at home?
- If you have Internet at home, what makes it difficult to use?
- What are locations in the community where you think it is especially important to have Internet (schools, hospitals, community centers, etc.)?
- Are the costs of computers/tablets or Internet service too high?
- What has been your experience with Internet Service Providers?

50 Vermont does not have any federally recognized tribes, but

the VCBB has still sought input and engagement from local Tribal organizations within Vermont.

[51] Events were held in Brattleboro (June 14), Rutland (June 17), Newport (June 19), Burke (June 22), Shoreham (June 26), and Swanton Village (June 27). Virtual events were held on June 14 and June

[52] The VCBB acknowledges that the IIJA and BEAD programs require States to consider "all provider types" in a fair and competitive process. The NTIA BEAD NOFO states that "[t] he Eligible Entity may not exclude, as a class, cooperatives, nonprofit organizations, public-private partnerships, private companies, public or private utilities, public utility districts, or local governments from eligibility as a subgrantee." For additional information on these requirements see the BEAD NOFO at p. 37.

[53] It is not clear from survey responses whether this means that the remaining 69% of survey respondents are satisfied with ISP customer service.

[56] BEAD NOFO, p.65 (Each Funded Network's outages should not exceed, on average, 48 hours over any 365-day period except in the case of natural disasters or other force majeure occurrence. Each Eligible Entity should ensure a prospective network is designed to meet this requirement and should develop metrics for measuring outages to be utilized in connection with this requirement once the network is operational.).

[57] : Vermont Ten-Year Telecommunications Plan, p. 15.

[58] The number of unserved and underserved locations in Vermont is based on the FCC's data as of June 15, 2023 after RDOF locations have been removed.

[59] ACA Connects. "BEAD Program: A Framework to Allocate Funding for Broadband Availability – Version 3.1" Available at: https://acaconnects.org/bead-program-framework/. The ACA Connects average cost to connect unserved locations in Vermont was $9,321 vs $11,116 in our model and their average cost to connect underserved locations in Vermont was $7,923 vs $8,307 in our model. However, they had a reduced set of locations; 33.7K locations consisting of 14.1K unserved locations and 19.6K underserved locations and many of these may have been in less challenging areas.

[60] Kim, Jonathan. "Fiber Optic Network Construction: Process and Build Costs." Digtl Infra. July 28, 2022. Available at: https://dgtlinfra.com/fiber-optic-network-construction-process-costs/

[61] Tarana. "New Study of Real-World Fiber Broadband Costs." Available at: https://www.taranawireless.com/fiber-study/.

[62] Published in June 2021, the Vermont Department of Public Service's 10-Year Telecommunications Plan estimates that reaching all unserved and underserved premises in Vermont with fiber-to-the-premises will cost between $362 million and $439 million. One important factor contributing to the difference between this estimate and our estimate is the rate of inflation over the last two years. The bottom end of this range also excluded off-grid locations (camps). In addition, it is likely that the mix of aerial and underground fiber will differ across different cost models. Available at: https://publicservice.vermont.gov/about_us/plans-and-reports/department-state-plans/telecommunications-plan/10-year.

[63] For example, many of these estimates do not include the cost of the fiber drop from a pole to a household or other customer premise, which could impact customer installation costs.
